### Evaluation Scales
- Terrible–Delightful
- Different–Similar
- Graphic Scales
- Don’t Like At All–Like a Lot
- Terrible–Great

### Chapter 4 Note: More Advanced Measurement and Scaling Examples

#### Advanced Ordinal Measurement Methods
- Paired Comparisons
- Rating Techniques
- Advanced Interval/Ratio Procedures
- Direct-Judgment Methods
- Fractionation
- Constant Sum

#### The Semantic Differential
- Techniques for Scaling Respondents
- The Summated Scale
- Multi-Items Scales

### Chapter 5: Demographic and Survey Administration Questions

#### Regularly Asked Questions
- Age
- Education
- Employment
- Family
- Gender
- Location
- Race

#### Demographic Questions (What are they?)
- Why do they matter?

#### Survey Administration Questions
- Informed Consent
- Attention Filters for Speeders and Cheaters
- “Trap” Questions
- Reverse Wording of Questions
- Timing

Introduction

Surveys... You’ve taken dozens of them. Usually because someone asked you, or because someone made you really happy or really mad. You wanted to right a wrong and the feedback form was the way to do just that. Or, maybe you registered an electronics product or received a gift card to give your opinion.

Surveys are all around us. They have been a part of society since at least the Roman Empire and probably earlier than that. The United States has taken a census every decade since 1790. Governments around the world have similar provisions.

Speaking of governments, elections themselves are really just surveys. Of course, instead of deciding which advertisement to use, customer service rep to promote, or color for the walls in your home, an election decides how a society will be run.

Surveys are inescapable. But how do you create a great one? You probably picked up this book to answer that exact question. And writing great surveys is what this book is all about.

We begin by giving you great tips for designing surveys and writing questions. In Chapter 3, we introduce 14 question types that are at the core of all survey research. Each question type has formatting and use options, resulting in hundreds of variations, one of which is sure to be perfect for the way you want to collect your data.

Chapter 4 introduces 50 answer scales that are ready for you to use. We include answer scales because researchers have created scales that reflect the subtleties of meaning. After all, concepts like satisfaction have broad meaning and may be measured using a simple satisfaction–dissatisfaction scale, but you may want to consider displeased–please; unhappy–happy; short of expectations–exceeded expectations; worse–better; poor–good; not like my ideal–like my ideal; and even miserable–delightful. Scales are an important part of the measuring meaning.

In Chapter 5, we present demographic and survey administration questions. You can plug these regularly-asked questions into any survey you create.

Much customer research focuses on measuring customer satisfaction and testing new products and concepts. Chapters 6 and 7 cover each of these topics in a little more depth. We explain the measurement theory and questions most often used in satisfaction and new product testing.

Lastly, we present the Qualtrics Survey Library as a resource for you to use in building your survey. We provide a selection of more than 50 surveys in the Appendix for you to examine and consider when selecting questions for your own survey.

It’s all here for you. Let’s get started.
GETTING STARTED IN 1 HOUR

This book contains a ton of great information, but don’t feel intimidated. While this book can provide hours of information and serve as a long-term reference, it only takes one hour to get started writing great surveys.

To get started, follow the steps below. After that, use this book as a reference guide in your research. You can always come back to answer your questions.

1. Read Chapter 1, Chapter 2, and Chapter 3 (20 minutes)
   In total, it’s about 20 pages. The first two chapters will give you 14 tips for writing questions and surveys. Chapter 3 gives a profile of each question type available in Qualtrics. Be sure to return and use the chapters as a reference.

2. Read the Introduction to Chapter 4 and the demographics explanation (5 minutes)
   This is about three pages. The introduction to Chapter 4 explains scales and why you should use them. In addition, it gives good tips for using scales in your analysis. The demographics explanation also covers why many surveys ask for your age, gender, or employment situation.

3. Flip through Chapters 4 and 5 (10 minutes)
   Get a feel for the scales and questions that are pre-built for you. This should only take 10 minutes.

4. If you want to learn more about satisfaction or concept test surveys, look at Chapters 6 and 7. The sample surveys at the end of each chapter will also give you a quick overview (10 minutes)

5. Find and review 5 different surveys in Chapter 8 and the Appendix (15 minutes)
   Unless one of the survey research genres fits you exactly, try reading one survey from each of five different genres. This will give you a feel for the proper flow of a survey and also show you multiple ways to handle similar situations.

EXTRA CREDIT: If you have 15 more minutes, go to the Qualtrics survey library and flip through the surveys.

So let’s get started. There is no time to waste.
7 Tips for Writing Surveys

Survey design and flow give power to your research. But great questions are the foundation for great research.
Keep It Simple

Do you remember taking the SAT or ACT? It’s a long and boring process.

Your average survey respondent can start to feel that way about 15 minutes into a survey. Fifteen minutes is a good upper-limit for most surveys.

WHEN A SURVEY IS TOO LONG, THREE BAD THINGS CAN HAPPEN

RESPONDENTS DROP OUT: They simply quit taking the survey. It costs money to find respondents, and a high drop-out rate can not only cost a lot, but can influence the quality of your results. Having a reward for completion can reduce drop-outs, but you can’t stop it completely.

PEOPLE STOP PAYING ATTENTION: Remember your elementary-school classmate who just filled in random bubbles during a test? He grew up. If it takes too long to take your survey, he might do it again. We actually see this a lot, and encourage researchers to use attention filters (see page 86) to prevent this problem.

CLIENTS GET ANGRY: The irony of upsetting customers with an overly long satisfaction survey is not lost on your respondents.

The best way to collect quality data is to keep your surveys short, simple, and well organized.

Use Scales Whenever Possible

Scales are more than a little important. They’re the subject of an entire chapter of this book. (see Chapter 4)

Rather than asking respondents a basic yes or no question, use scales that measure both the direction and the intensity of opinions. This is critical for research. Someone who “Strongly Supports” a decision is very different from someone who only “Slightly Supports” it.

Scales extend the power of analysis from basic percentages to high level analyses based on means and variance estimates (like t-test, ANOVA, regression, and the like).
**MEAN:** Often referred to as an average, it is the sum of all the values divided by the number of values.

**MEDIAN:** The middle point in a data set. To determine the median, lay out a distribution from lowest to highest and select the middle value.

**RANGE:** The highest and lowest data points in a distribution form the range.

**VARIANCE:** A dispersion measure of how far a set of numbers is spread out.

**EXAMPLE:** Assuming we have data points 1, 2, and 6:

Mean: \( \frac{9}{3} = 3 \)

Median: 2

Range: 1-6

Variance: 7

Use scales whenever you can. You will get more information from each question.

Chapter 4 of this book shows the many scale types.

### Keep Coded Values Consistent

Every survey response, option, question, or answer is coded as a numeric value that is reported as a percent of responses or as a mean, median, range, etc. These values are the basis for analysis.

Values must be coded consistently. Generally, we assign the highest value to the best outcome (i.e., “Strongly Agree” that customer service is responsive) and then move down from there.

For simplicity, keep your scale direction consistent throughout your survey. This makes it easier for respondents to answer and for you as a researcher to conduct your analysis. If scales have the same scale of points, you can quickly compare responses to different questions. For example, if a survey asks respondents to rate a series of statements from Strongly Disagree to Strongly Agree, the responses are given these values:

<table>
<thead>
<tr>
<th>Strongly Disagree</th>
<th>Disagree</th>
<th>Neither Agree nor Disagree</th>
<th>Agree</th>
<th>Strongly Agree</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image1" alt="Strongly Disagree" /></td>
<td><img src="image2" alt="Disagree" /></td>
<td><img src="image3" alt="Neither Agree nor Disagree" /></td>
<td><img src="image4" alt="Agree" /></td>
<td><img src="image5" alt="Strongly Agree" /></td>
</tr>
</tbody>
</table>

Standard scaling helps managers to quickly understand customer service ratings by simply looking at averages. For example, once managers understand that a 5-point agreement scale is being used, they could be given the mean results for the following customer evaluation (agreement) statements:

- **I AM COMPLETELY SATISFIED WITH THE CUSTOMER SERVICE** – 3.15
- **THE CUSTOMER SERVICE IS PROMPT** – 4.12
- **CUSTOMER SERVICE REPRESENTATIVES ARE POLITE** – 4.67
- **CUSTOMER SERVICE REPRESENTATIVES ARE KNOWLEDGEABLE** – 2.08
Since all the statements are positive and the values are scaled consistently, a higher mean reflects better results in that area. A manager can look at these means and quickly identify the 2.08.

We see that customer service representatives are prompt and polite, but they don’t seem to know what they’re talking about. As a result, overall satisfaction with customer service is perhaps much lower than it could be.

You can reverse scales (or word questions negatively) to encourage respondents to read more carefully. However, if you use reversed scales or negative wording for some items, be sure to recode the scales so that all scales point in the same direction. This will allow you to quickly compare multiple areas of customer service. (You can do recodes easily in Qualtrics.)

The simplest solution is just to keep all scales consistent throughout every survey.

**Explain Why**

Respondents are more likely to help you if they see something of positive value for them. Value offerings can range from a very general altruistic appeal for their help to a very specific offer of an economic incentive. For instance, with a customer feedback survey, you can explain that feedback will help improve customer service.

**MAKE IT SPECIFIC TO THEM**

With employee evaluations, you can explain that feedback will be used to determine awards, promotions, and pay raises and will help management make organizational decisions that will affect them.

**EXPLAIN UNEXPECTED QUESTIONS**

Explain unexpected questions. For instance, if it’s important for you to ask toy store customers their preferred color of jeans, you might want to explain why that is relevant.

**JUSTIFY REQUESTS FOR SENSITIVE INFORMATION**

This is particularly true with any information that may be deemed sensitive. You can often diffuse respondents’ concerns about sharing information by telling them how it is going to be used. For instance, you can explain that purchasing habits will only be analyzed in aggregate for benchmarking purposes or that results will not be shared outside your organization.
Speak Your Respondents’ Language

Asking about caloric content, bits, bytes, and other industry specific jargon and acronyms is confusing. Make sure your audience understands your language level and terminology and above all, that they understand what you are asking.

The best move is to write to your least-informed respondent. If a respondent won’t understand an acronym, either define it, or don’t put it in.

Follow a Logical Order

Make your survey easier for respondents by keeping questions in their logical order. Avoid changing topics unnecessarily.

USE THE FUNNEL APPROACH

The funnel approach makes the respondent’s job easier.

- Start with broad and general questions that qualify the respondent and introduce the topic
- Move into more specific questions
- Finish with general, easy-to-answer questions (like demographics)

This approach allows respondents to warm up with broad and general questions, work into more specific and in-depth questions, and cool down at the end.

This turns the survey into a smooth road for respondents, which decreases drop-out rates and may even increase the quality of answers you receive.
Take Your Survey for a Test Drive

Even the best researchers have the occasional typo, misdirected question, or unfamiliar buzz word in their surveys. Finding these last little issues is a difficult process. Fortunately, there is an easy solution:

ASK 5 PEOPLE FROM YOUR TARGET DEMOGRAPHIC TO TAKE YOUR SURVEY

Then ask them:

- HOW LONG DID IT TAKE? (be sure to keep it short.)
- WHICH QUESTIONS WERE CONFUSING?
- WERE THERE ANY OTHER PROBLEMS WHILE TAKING THE SURVEY?

This allows you to quickly correct lingering problems before distribution.

Summary

Survey building is as much an art as it is a science. It involves attention to detail in the design and flow of your survey. Keep it simple, keep your scales consistent, and communicate well. Review your question flow and then pretest. These simple tips will go a long way toward building your “perfect” survey.
Details, details, details. Follow these simple tips to make sure you get the little things right in your next survey.
Avoid Leading Words / Questions

Subtle wording differences can produce great differences in results. “Could,” “should,” and “might” all sound about the same, but may produce a 20% difference in agreement to a question.

**Q-TIP**

Strong words, such as “force” and “prohibit” represent control or action and can bias your results.

**EXAMPLE**

_The government should force you to pay higher taxes._

No one likes to be forced, and no one likes higher taxes. This agreement scale question makes it sound doubly bad to raise taxes. Wording alternatives can be developed. How about simple statements such as: _The government should increase taxes, or the government needs to increase taxes._

_How would you rate the career of legendary outfielder Joe Dimaggio?_

This question tells you Joe Dimaggio is a legendary outfielder. This type of wording can bias respondents. How about replacing the word “legendary” with “baseball” as in: _How would you rate the career of baseball outfielder Joe Dimaggio?_

Give Mutually Exclusive Choices

Multiple choice response options should be mutually exclusive so that respondents can make clear choices. Don’t create ambiguity for respondents.

**Q-TIP**

Review your survey and identify ways respondents could get stuck with either too many or no correct answers. Revise accordingly.

**EXAMPLE**

_What is your age?_

- 0–10
- 10–20
- 20–30
- 30–40
- 40+

What answer would you select if you were 10, 20, or 30? Questions like this will frustrate a respondent and invalidate your results.
What type of vehicle do you own?

- Van
- SUV
- Sedan

This question has the same problem. What if the respondent owns a truck, hybrid, convertible, cross-over, motorcycle, or no vehicle at all?

**Ask Direct Questions**

Questions that are vague and do not communicate your intent can limit the usefulness of your results. Make sure respondents know what you’re asking.

**Q-TIP**

Test your survey with five friends and check to see if responses are on topic.

**EXAMPLE**

*What suggestions do you have for improving Tom’s Tomato Juice?*

This question may be intended to obtain suggestions about improving taste, but respondents will offer suggestions about texture, the type of can or bottle, about mixing juices, or even suggestions relating to using tomato juice as a mixer or in recipes.

*What do you like to do for fun?*

Finding out that respondents like to play Scrabble isn’t what the researcher is looking for, but it may be the response received. It is unclear that the researcher is asking about movies vs. other forms of paid entertainment. A respondent could take this question in many directions.

**Add a “Prefer Not to Answer” Option**

Sometimes respondents may not want or be able to provide the information requested.

Questions about income, occupation, finances, family life, personal hygiene, and personal, political, or religious beliefs can be too intrusive and be rejected by the respondent. Privacy is an important issue to most people. Incentives and assurances of confidentiality can make it easier to obtain private information.
While current research does not support that PNA (Prefer Not to Answer) options increase data quality or response rates, many respondents appreciate this non-disclosure option.

Furthermore, different cultural groups may respond differently. One recent study found that while U.S. respondents skip sensitive questions, Asian respondents often discontinue the survey entirely.

**Q-TIP**

Some types of demographic questions are very sensitive for some categories of respondents. So when in doubt, give respondents a PNA for the question.

**EXAMPLE**

What is your race?  What are your religious beliefs?
What is your age?  What are your political beliefs?
Did you vote in the last election?  What is your annual household income?

These questions should be asked only when absolutely necessary. In addition, they should always include an option to not answer. (e.g. “Prefer Not to Answer”).

**Cover All Possible Answer Choices**

Do you have all of the options covered? If you are unsure, conduct a pretest using “Other (please specify)” as an option.

**Q-TIP**

If more than 10% of respondents (in a pretest or otherwise) select “other,” you are probably missing an answer. Review the “Other” text your test respondents have provided and add the most frequently mentioned new options to the list.

**EXAMPLE**

You indicated that you eat at Joe’s Fast Food once every 3 months. Why don’t you eat at Joe’s more often?

- There isn’t a location near my home
- I don’t like the taste of the food
- Never heard of it

This question doesn’t include other options, such as healthiness of the food, price/value or some “other” reason. Over 10% of respondents would probably have a problem answering this question.
Use Unbalanced Scales Carefully

Unbalanced scales may be appropriate for some situations and promote bias in others. For instance, a hospital might use an Excellent - Very Good - Good - Fair scale where “Fair” is the lowest customer satisfaction point because they believe “Fair” is absolutely unacceptable and requires correction.

The key is to correctly interpret the scale. If “Fair” is the lowest point on a scale, then a result slightly better than fair is probably not a good one.

Additionally, scale points should represent equi-distant points on a scale. That is, they should have the same equal conceptual distance from one point to the next. For example, researchers have shown the points to be nearly equi-distant on the strongly disagree–disagree–neutral–agree–strongly agree scale.

**Q - T I P**

Set your bottom point as the worst possible situation and top point as the best possible, then evenly spread the labels for your scale points in-between.

**E X A M P L E**

<table>
<thead>
<tr>
<th>What is your opinion of Crazy Justin’s auto-repair?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pretty Good</td>
</tr>
<tr>
<td>Great</td>
</tr>
<tr>
<td>Fantastic</td>
</tr>
<tr>
<td>Incredible</td>
</tr>
<tr>
<td>The Best Ever</td>
</tr>
</tbody>
</table>

This question puts the center of the scale at fantastic, and the lowest possible rating as “Pretty Good.” This question is not capable of collecting true opinions of respondents.

Ask One Question at a Time

There is often a temptation to ask multiple questions at once. This can cause problems for respondents and influence their responses.

**Q - T I P**

Review each question and make sure it asks only one clear question.
What is the fastest and most economical Internet service for you?
This is really asking two questions. The fastest is often not the most economical.

How likely are you to go out for dinner and a movie this weekend?
Even though “dinner and a movie” is a common term, this is two questions as well. It is best to separate activities into different questions or give respondents these options:

- Dinner and Movie
- Dinner Only
- Movie Only
- Neither

Summary

While not totally inclusive, these seven tips are common offenders in building quality questions:
- Avoid leading words/questions
- Give mutually exclusive choices
- Ask direct questions
- Consider adding a “Prefer not to answer” option
- Cover all the possible choices
- Use unbalanced lists carefully
- Ask one question at a time

These tips focus on creating clear questions and having an understandable, appropriate, and complete set of answer choices. Great questions and great answer choices lead to great research success.
Survey research drives many decisions of practical interest, including concept testing for new products, positioning brand and corporate image, evaluating ad copy, and determining how to satisfy customers. Regardless of the research topic, useful data is obtained only when the researcher exercises care in defining:

1. What construct is to be measured?
2. How is the construct measurement to be scaled?
3. How is the measurement conducted?
4. How is the resulting data analyzed?

Definitions and decisions play a significant role in scientific inquiry, especially in marketing research and the behavioral sciences.

In this note, we focus on conceptual and operational definitions and their use in research. Increasingly, behavioral scientists are paying greater attention to defining concepts and their associated measurement scales.

Later, in Notes for Chapter 3, we discuss measurement scales and their relationship to selecting appropriate statistical techniques. This section serves as useful background for the discussion of statistical analysis.

The overall quality of a research project depends not only on the appropriateness and adequacy of the research design and sampling techniques, but also on measurement procedures.

**Definitions in Marketing Measurement**

Marketing success is measured by new product ratings, increased brand awareness, brand likeability ratings, uniqueness, purchase intent, and customer satisfaction. Researchers often model and measure these constructs.

Models represent reality and therefore raise the fundamental question of how well the model represents reality on all significant issues. The quality of a model is judged against the criteria of *quality* and *utility*. Quality refers to a model's
Building Blocks for Measurement and Models

We cannot measure attitude, market share, sales or any other concept without first understanding what we are measuring and how it is defined, formed, and related to other marketing variables. With this in mind, we briefly mention the building blocks of measurement theory: concepts, constructs, variables, operational definitions, and propositions.

CONCEPTS AND CONSTRUCTS

A concept is a theoretical abstraction formed by a generalization about particulars. “Mass,” “strength,” and “love” are all concepts, as are “advertising effectiveness,” “consumer attitude,” and “price elasticity.” Constructs are also concepts, but they are observable and measurable and defined in terms of other constructs. For example, the construct “attitude” may be defined as “a learned tendency to respond in a consistent manner with respect to a given object.” Attitudes are often measured as a sum of brand attribute performance and importance evaluations.

VARIABLES

Researchers loosely give the name “variables” to the constructs that they study. A question in a survey is a variable representing the constructs in measured and quantified form. The answer reports the different values that the respondents give to the variable.

MEASUREMENT

We can talk about “consumer attitudes” as if we know what the term means, but the term makes little sense until we
define it in a specific, measurable way. An operational definition assigns meaning to a variable by specifying what is measured and how it is measured. It is a set of instructions defining how we are going to treat a variable. For example, expectancy value models use attitudes to predict behavioral intention (intention to try, intention to purchase, intention to recommend, or intention to re-purchase a product or service). First developed in the 1960’s, this methodology has become a mainstay of marketing research and performs well in predicting both consumer behavior and consumer satisfaction/dissatisfaction.

The Expectancy value model uses attitudes and beliefs in a mathematical formulation that links attitudes to intentions to behavior in the following manner:

- Actual purchase of a Toyota Prius (Behavior B), is approximated by intention to purchase a Toyota Prius (Behavioral Intention BI), which in turn is approximated by the Overall Attitude toward a Toyota Prius.
- The Overall Attitude toward a brand, which in this case is the Toyota Prius, equals the sum of all relevant and important attitudes, \( \sum_{i=1}^{k} a_i \) about the brand. These attitudes are weighted by how important each attitude is in the purchase decision process (bi).

- The overall attitude is formed by multiplying ai (the person’s liking of attribute i), by bi (the importance of attribute i in the purchase decision).

Mathematically, this is expressed as:

\[
B \approx BI \approx A_o = \sum_{i=1}^{k} (a_i \cdot e_i)
\]

Operationally, ai is the affective (liking) component of the evaluation of attribute i. The evaluation would use a five or seven point scale with endpoints ranging from “Poor” to “Excellent” or “Not at all Desirable” to “Very Desirable.” (see the far right panel of Figure 1).

Operationally, ei (the importance of attribute i in the context of behavior B), is sometimes measured as the probability of attribute i being associated with brand X. At other times, it is measured as the importance of attribute i in achieving behavior B. Using the context of purchasing a Toyota Prius, the attribute “Gets 50 miles per gallon” could be rated on a seven point scale with endpoints labeled “Very Unlikely” and “Very Likely,” or as in the example below, is measured as “Not at all Important” to “Very Important.” See the left side of Figure 1.

<table>
<thead>
<tr>
<th>IMPORTANCE</th>
<th>PERFORMANCE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Not at all Important</td>
<td>Somewhat Unimportant</td>
</tr>
<tr>
<td>Gets 50 miles / gallon</td>
<td></td>
</tr>
<tr>
<td>Has a 6 year 60,000 mile drive train warranty</td>
<td></td>
</tr>
</tbody>
</table>

**Figure 1 Expectancy Value Importance-Performance Rating Scales**

The expectancy value model predicts behavior by summing the attitudes and beliefs about a product’s most important attributes (Figure 2). This powerful approach to measuring customer attitudes and predicting customer behavior is a mainstay in consumer research and the basis of many popular indices and methodologies.
PROPOSITIONS

A proposition defines the relationships between variables. Both the variables influencing the relationship and the form of the relationship must be specified. For example, the concept “sales” is some function of the concept “advertising,” such that Sales = f (Adv). This relationship can be made more complex by adding intervening variables along with the relevant ranges for the effect, including where we would observe saturation effects, threshold effects, and the mathematical shape of the relationship (linear, curvilinear, etc.).

INTEGRATION INTO A SYSTEMATIC MODEL

A model is produced by linking propositions together to provide a meaningful explanation of a system or a process. A research plan then links concepts, constructs, variables, and propositions into a model for the research. Conceptually, we should ask the following questions:

- Are concepts and propositions specified?
- Are the concepts relevant to solving the problem?
- Are the principal parts of the concept clearly defined?
- Is there consensus as to which concepts explain the problem?
- Are the concepts properly defined and labeled?
- Is the concept specific enough to be operationally reliable and valid?
- Do we link the concepts through clear assumptions made in the model?
- Are the limitations of the model stated?
- Can the model explain and predict?
- Can the model provide results for managerial decision making?
- Can the model be readily quantified?
- Are the outcomes of the model supported by common sense?
If the model does not meet the relevant criteria, it should be revised: concept definitions made more precise; variables redefined, added, or deleted; operational definitions and measurements tested for validity; and/or mathematical forms revised.

## Inaccuracies in Measurement

Before delving into measurement scales and question types, it is helpful to remember that measurements in marketing research are rarely “exact.” Inaccuracies in measurement arise from a variety of sources or factors. We can categorize the possible sources causing variations in respondent scores as follows:

- True differences in the characteristic or property
- Relatively stable characteristics of individuals that affect scores (intelligence, extent of education, information processed)
- Transient personal factors (health, fatigue, motivation, emotional strain)
- Situational factors (rapport, distractions)
- Variations in administering the measuring instrument, such as interviewers
- Sampling items included in the instrument
- Lack of clarity (ambiguity, complexity, interpretation of words and context)
- Mechanical factors (lack of space to record response, appearance of instrument, browser incompatibility)
- Factors in the analysis (scoring, tabulation, statistical compilation)
- Variations not otherwise accounted for (chance), such as guessing an answer

Ideally, variation within a set of measurements would represent only true differences in the characteristic being measured. Many sources of potential error exist in measurement. Measurement error has a constant (systematic) dimension and a random (variable) dimension. We expect random error (it is just as likely to be greater than the true values as less) to sum (all errors for any single variable) to zero and is, therefore, less worrisome than nonrandom measurement error.

Systematic error is a flaw in the measurement instrument, the research, or the sampling design. Unless the flaw is corrected, the researcher can do nothing to get valid results after the data are collected. These two subtypes of measurement error affect the validity and reliability of measurement and were discussed in the first volume of this book. Now that we are aware of the conceptual building blocks and errors in measurement and that they relate to developing measurement scales, we will consider the types of measurement and associated questions commonly used in marketing research.
14 Question Types

Qualtrics has more than 100 available question variants. These variants fit neatly into 14 different general types of questions. This chapter will introduce you to all your options.
Multiple Choice

Multiple choice questions are the most frequently used in all of research. The multiple choice question allows the respondent to choose one or multiple options from the list of choices, as shown in Figure 3-1.

![Multiple Choice Examples](image)

Figure 3-1 The most common single answer and multiple choice question.

This versatile question type is recognized by anyone who has ever taken a survey. It is popular precisely because it is versatile.

**BENEFITS**
- Simple to understand
- Versatile display options
- Standard question type
- Flexible for custom scales

**CAVEATS**
- Other question types may better suit special needs, or provide more advanced measurement scales

**TYPICAL USES**
- Basic text choices
- Graphical choices
- Scales
- Standardized Tests

**FROM THIS SINGLE QUESTION TYPE, THERE ARE MANY FORMAT OPTIONS:**

- **SINGLE ANSWER:** Radio buttons format. The standard single-select option.
- **MULTIPLE ANSWER:** Checkboxes format. Respondents can select more than one choice.
- **DROP-DOWN LIST:** Places choices in a drop-down list. This option is only a single answer option.
- **SELECT BOX:** Places answer choices in an item selection box. A single option can be selected.
  - **MULTI SELECT BOX:** Places choices in an item selection box. Multiple answers can be selected.
  - **POSITIONING OPTIONS:** Only visible when single answer or multiple answer is selected.
- **VERTICAL:** Aligns choices vertically.
- **HORIZONTAL:** Aligns choices horizontally.
- **COLUMN:** Aligns choices in columns and allows you to specify the number of columns answers are displayed in.

Qualtric users frequently use graphic choices in a multiple choice question to measure preferences.
Matrix Table

Matrix table questions are also very popular. This question type allows you to ask many multiple choice questions that use the same answer scale. This is a great way to save space, to shorten the appearance of your survey, and to make the task easier for respondents (Figure 3-2).

![Figure 3-2 Example of the Matrix Table that uses a likert scale question.](image)

This question type combines multiple questions. Rather than rebuild the same scale dozens of times with separate multiple choice questions, the matrix table reduces respondent effort by condensing multiple questions into one.

**BENEFITS**
- Saves time for the survey builder
- Combines multiple questions to save space
- Makes it easier for respondents to answer many questions using the same evaluation scale and frame of reference

**CAVEATS**
- Scale points must be identical

**TYPICAL USES**
- Employee Evaluations
- Customer Satisfaction
- Attitude Measurement

**FORMATTING OPTIONS**

**Question Scale Type**
- **LIKERT**: Allows you to label the scale of choices across the top.
- **BIPOLAR**: Also known as a semantic differential, allows you to place two opposite choices on either side of a scale. The respondent can then choose from the options in between the two bipolar scale points.
- **RANK ORDER**: Combines the matrix and the rank order question types. It allows respondents to type in a ranking for each scale point as it applies to each statement.
• **CONSTANT SUM**: Combines the matrix and constant sum question types, such that the respondents type in a value for each scale point. The sum is totaled at the end of each row.

• **TEXT ENTRY**: Combines the matrix and text entry question types. It allows respondents to type in comments and other information for each specific scale point. The length of the text fields can be set to short, medium, or long.

• **PROFILE**: Similar to the Likert scale, but it allows you to use a different set of adjectives for each row of scale points.

**Answer Options**

• **SINGLE ANSWER**: One scale point can be selected per row.

• **MULTIPLE ANSWER**: Multiple scale points can be selected per row. Changes scale points to check boxes.

• **DROP-DOWN LIST**: Places scale points into a drop-down list. This is only single answer.

**Options**

• **TRANSPOSE TABLE**: If selected, switches the position of the scale points and row statements. Button behavior is reversed as well. Single answer will only allow one selection per column, as opposed to one selection per row.

• **POSITION TEXT ABOVE**: Places text above the row of buttons, rather than to the side, allowing more room for the scale points. Available for all matrix types, except profile.

• **REPEAT HEADERS**: Repeats the text of the scale points in the middle of the question, at the bottom of the question, or in both positions. Select repeat headers and then specify the location.

• **ADD WHITE SPACE**: Will place additional white space between sets of rows to make the question easier to view.
Side-by-Side

This specialized question type allows you to ask multiple questions about the same items in a matrix table. This format is easier for the respondent and ideal for getting multiple responses to the same concept, item, or statement.

Side-by-side places multiple matrix Likert questions next to each other in separate columns (Figure 3-3). The row statements are the same across all columns, but the scale is different for each column. Note that each column of the question is displayed in the results as a separate question.

Figure 3-3  Example of Side by Side question type.

**BENEFITS**
- Ask multiple questions about the same items

**CAVEATS**
- Can make surveys longer and more difficult
- Can be cognitively taxing for the respondent

**TYPICAL USES**
- Rate multiple aspects or occasions for multiple products or services use
- Ask two-part “(performance, importance)” questions
- Ask two-part “satisfaction—likelihood of repurchase” questions

**FORMATTING OPTIONS**

**Scales**
- **DROP-DOWN LIST:** All scale points appear in a drop-down list.
- **SINGLE ANSWER:** Radio buttons are used to allow only one selection.
- **MULTIPLE ANSWER:** Checkboxes are used to allow multiple selections.

**Open-Ended Text**
- **SHORT:** Short text box length, more suitable for numbers.
- **MEDIUM:** Medium text box length, more suitable for small amounts of text.
- **LONG:** Long text box length, more suitable for larger amounts of text.

To access the options for each side-by-side variation, click on the Column Options drop-down for each column you have inserted.
Text Entry

Text entry questions allow respondents to provide verbatim responses, such as comments and contact information.

![Qualtrics Text Entry Example](image)

*Figure 3-4 Example of Text Entry Multi Line question type.*

**Benefits**

- Learn exactly what respondents want to say
- Get uncensored feedback

**Caveats**

- Limited reporting features
- Hard to summarize a large number of responses

**Typical Uses**

- With a sentiment question: “Was your response positive or negative?”
- With a bucket of questions: “Please tell us which category best describes your ???”
- Open-ended qualitative feedback about experiences
- “Is there anything else you would like to tell us about X?”
- Reasons why satisfied or not satisfied
- With a word cloud analysis

**Formatting Options**

- **Single Line:** The height of a single line and designed for smaller amounts of text.
- **Multi-Line:** The height of multiple lines of text and designed for more text.
- **Essay Text Box:** The height of multiple lines of text (more than the multi-line option) and designed for the maximum amount of text. Useful when prompting respondents to give a lengthy response.
- **Form:** Allows you to create a form with multiple text entry fields. Typically used when requesting contact information. Can be altered for short, medium, long, and essay size text fields. Allows content validation (numbers only, text only, email address) to be applied to individual rows.
- **Password:** Similar to the single line text entry option, but the entered text appears as an entered password (example: *****).

You can also choose validation options for characters and content. For more information on validation options, check out the Validation section.
Text/Graphic

The text/graphic question allows you to place explanatory or introductory text at the beginning of your survey without having answer choices attached (Figure 3-5). It is also useful when inserting images, files, and videos.

Figure 3-5 Example of Text/Graphic question type.

This question type does not have answer choices for a respondent to select, so it is strictly for explanatory or instructional purposes. You can base logic off whether or not the text/graphic question type was displayed to the respondent.

The text/graphic question type is *not* displayed in the reports, but it does have a column in the data you download from the download data page. The data will be marked with a “1” for respondents if they saw the text/graphic question.

**BENEFITS**
- Doesn’t ask a question
- Not included in survey report

**CAVEATS**
- Doesn’t require a question response

**TYPICAL USES**
- Introduction for survey
- Heading for group of questions
- Instructions section
- Illustrations, video presentation
- Experimental treatment

**FORMATTING OPTIONS**
- Text
- Piped Text
- Graphic
- File
- Video
Constant Sum

The constant sum question produces a comparative evaluation of several choice options. Respondents are given a set number of units to distribute. This question type often asks respondents to allocate percentages, a fixed number of points, or a specific amount of money among different options.

Figure 3-6  Example of a constant sum question type with a Total box.

**BENEFITS**
- Provides for comparative judgments
- Has a true zero value for any option
- Provides ratio scale measurements (advanced statistical analysis)

**TYPICAL USES**
- Allocate time, points, money, or percentage among multiple options
- Identification of relative importance of alternatives

**FORMATTING OPTIONS**
- **CHOICES:** Allows respondent to type in a value. A total box can be displayed, and the choices can be displayed vertically or horizontally.
- **BARS:** Displays adjustable bars the respondent slides left to right. You can control how many grid lines, the min/max values, if and how many scale points are displayed, whether the value is displayed to the right of each row, and a custom start position. Commonly used as a more interesting way to gather respondent data.
- **SLIDERS:** Like the bars, this displays graphical sliders the respondent slides left to right. You can control the number of grid lines, the min/max values, if and how many scale points are displayed, whether a value is displayed to the right of each row, and a custom start position. Commonly used as a more interesting way to gather respondent data.
The slider allows respondents to drag sliders or bars to express numeric amounts (Figure 3-7). This question type is interactive, involving, and attention grabbing. It can be a good alternative to the matrix table. This is very similar to the constant sum sliders question type.

Scales can get boring, especially when all the answer choices are numbers. The slider is a great alternative that gives someone a 1-10 (or 1-100) sliding scale to answer a question. Sliders require involvement and can help keep your respondent’s attention level high.

**BENEFITS**
- Allows for a large scale without overwhelming respondents
- More interesting for respondents than radio buttons
- Keeps respondents attentive and involved
- Flexible number of scale points

**CAVEATS**
- Used only for scaled questions

**TYPICAL USES**
- Satisfaction Questions
- Rating New Products

**FORMATTING OPTIONS**
- Number of Statements
- Number of Labels
- Bars, Sliders
- Grid Lines
- Include Decimal Points
- Show Value
- Custom Start Position
- Not Applicable Box
- Min / Max Value
Sliding Scales

The sliding scale allows respondents to express themselves using graphical gauges, thermometers, stoplights, grades, blocks, smiley faces, and more (as shown in Figure 3-8).

Figure 3-8 Example of a Sliding Scale question type with Smiley face graphics.

**BENEFITS**
- Unique and highly interesting
- Sliders require involvement
- Useful to break monotony of standard questions

**CAVEATS**
- May not be appropriate for professional looking surveys

**TYPICAL USES**
- Useful for children (K–12) surveys
- Useful where language is a problem
Rank Order

With rank order questions, respondents can express their preference for items by ranking or ordering them. Rank order questions do not provide a measure of degree to which the choices differ, only their rank position of difference. To explain further, suppose that in exhibit 3-9, the numbers represent the actual preference order. Preference order does not show how much Firefox is preferred over the other browsers, if the top 3 are nearly interchangeable, or have any degree of similarity.

Knowing how multiple options compare in a respondent’s mind can be very useful. The rank order question can ask respondents to rank a list of options based upon any criteria.

**BENEFITS**
- Understand relative value
- Make surveys entertaining with drag & drop
- Breaks ties when scales don’t distinguish alternatives well

**CAVEATS**
- Limited for comparative value
- Does not show degree of difference, only order

**TYPICAL USES**
- Asking respondents to rank brands / products
- Ranking based on a condition

**FORMATTING OPTIONS**
- **DRAG AND DROP**: Respondents drag and drop choices into position. Useful for interaction and keeping participants attentive.
- **RADIO BUTTONS**: Allows respondents to rank the statements by clicking radio buttons. It looks similar to the matrix Likert question type with slightly different functionality.
- **TEXT BOX**: Allows respondents to rank statements by typing a number.
Pick, Group, and Rank

Sometimes ranking isn’t enough. You may need to group respondents and then rank them within those groups. That’s what the pick, group, and rank question allows you to do (Figure 3-10).

![Figure 3-10 Example of Pick, Group, and Rank - Drag and Drop question type.](image)

**Benefits**
- Specialized version of rank order question
- Pre-defined categories maybe specified
- Respondent defined categories may be created

**Caveats**
- Limited to very specialized situations

**Typical Uses**
- Group brands as desirable / not desirable and then rank accordingly
- Categorize concepts by similarity and then rank by preference
- Identify usage occasions and then rank by usage frequency

**Formatting Options**
- **Drag and Drop:** Respondents drag and drop the choices into groups and rank them. The groups are defined by the survey builder (like predefined option).
- **Predefined:** You predefine the groups. Instead of dragging and dropping, the respondent selects the answer choice and clicks an arrow to move the answer choice into the groups you have defined. Once in the group, the respondent uses similar arrows to move the choice up or down to rank it within the group.
- **Recipient Defined:** The respondent can specify the names of the groups and number of groups in the question. Instead of dragging and dropping, the respondent selects the answer choice and clicks an arrow to move the answer choice into the group they choose. Once in the group, the respondent uses similar arrows to move the choice up or down to a rank position within the group.
The drill down question type allows respondents to choose an answer option by narrowing down the choice from a general category to a specific category (Figure 3-11). In order to achieve this objective, you must upload a file (.csv) and provide ALL possible combinations within the different categories.

![Figure 3-11 Example of Drill Down Question.](image)

**CREATING THE DRILL DOWN TAKES MULTIPLE STEPS**

1. Form a list of answer choices.
   a. An example file is available to you by selecting **Click here to add answers** (after you’ve inserted the drill down question type) and clicking the **Example Document** button on the right side of the dialog box that appears.
2. Create your answer choice selections starting with broad categories and getting more specific. The example below illustrates this (Table 3-12).
3. After creating your list, upload it to your survey by clicking **Click here to add answers** in your drill down question.

<table>
<thead>
<tr>
<th>Column 1</th>
<th>Column 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>String</td>
<td>Violin</td>
</tr>
<tr>
<td>String</td>
<td>Viola</td>
</tr>
<tr>
<td>String</td>
<td>Cello</td>
</tr>
<tr>
<td>Woodwind</td>
<td>Flute</td>
</tr>
<tr>
<td>Woodwind</td>
<td>Clarinet</td>
</tr>
<tr>
<td>Woodwind</td>
<td>Oboe</td>
</tr>
<tr>
<td>Brass</td>
<td>Trumpet</td>
</tr>
<tr>
<td>Brass</td>
<td>Trombone</td>
</tr>
<tr>
<td>Brass</td>
<td>Tuba</td>
</tr>
</tbody>
</table>

*Table 3-12 Example format for Drill Down question type*
In this example, musical instruments are used as answer choice options according to their type and name. Column 2 contains all the instrument names and Column 1 contains all the instrument types to which Column 2 named items correspond.

<table>
<thead>
<tr>
<th>Q - T I P</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Make sure the file you create is saved from Excel or another spreadsheet program as a .csv file (a text file).</td>
</tr>
<tr>
<td>• In the Add Answers to Drill Down window, make sure the correct delimiter is selected under Import Options. Commas are most common, but this can vary depending on the country you live in, so select one of the available options or type the symbol into the text field of the delimiter you are using (“,” “,” “,” etc.).</td>
</tr>
</tbody>
</table>

Often a question has hundreds of response options, but they’re segregated into groups. A drill-down question can help respondents find the answer they’re looking for, without the hassle of a huge list.

**BENEFITS**

- Manage hundreds of possible answers in one simple interface
- Guide respondents through answer categories to possible answers for easy selection
- Guides respondents to a predefined list of answers

**CAVEATS**

- Analysis options are limited
- Used for factual data, rarely for subjective data

**TYPICAL USES**

- Choose locations (Country, State, City)
- Choose cars (Year, Make, Model)

**FORMATTING OPTIONS**

- # Choice menus
Heat Map

The heat map allows you to insert a picture that the respondent can then click to indicate the area of interest that catches their attention, or that they like the most. In the results, you will be able to see where all the respondents clicked (see Figure 3-13).

You can enhance image testing by tracking a click. The heat map asks respondents to click a spot, and then the results are displayed in a heat map. This is ideal for specific image questions.

**BENEFITS**
- Heat map graphics analysis
- Visual - Non-verbal evaluation
- Quick and easy

**CAVEATS**
- Specialized use application
- No measurement (like eye tracking) an autonomic physiological

**TYPICAL USES**
- Where do you look first?
- What is your favorite part of this picture?
- Most preferred area
Hot Spot

Need to ask questions about an image? The hot spot question type can make the task interesting for respondents and helps them know exactly what you’re asking. Place an image in front of respondents, designate wire-frame areas you want respondents to evaluate, and ask respondents to rate them as good or bad by clicking on those spots.

**Figure 3-14  Example of hot spot question type.**

**BENEFITS**
- Entertaining for respondents
- Enhanced image testing

**CAVEATS**
- Limited to images
- Up to two answers available (e.g. Yes / No, Good / Bad, Selected, Not Selected)

**TYPICAL USES**
- Test like / dislike graphic or style or advertisement
- Test web interface
- Most noticed

**FORMATTING OPTIONS**

**On/Off:** Respondents can “turn on” or “turn off” certain areas by clicking.
- Green means the section is **On**.
- No color means the section is **Off**.

**Like/Dislike:** Respondents can “like” or “dislike” certain areas by clicking once or twice.
- Green means **Like** is selected (one click).
- Red means **Dislike** is selected (two clicks).
- No color means neither **Like** nor **Dislike** is specified.
Gap Analysis

In some ways similar to the side-by-side and matrix questions, the gap analysis allows respondents to rate satisfaction on a five-point smiley face scale, and then specify why they selected the rating using the Tell Us Why section (see Figure 3-15).

![Example of gap negative question type.](image)

**BENEFITS**
- Provides in-depth understanding of the reason behind an evaluation
- Mixes metric scale with nominal categories
- Shortcute to open end text follow-up

**CAVEAT**
- Requires extensive research to accurately identify the causal categories

**TYPICAL USES**
- Product evaluation
- Problem isolation - identification
- Automobile, hospitality service industries

**FORMATTING OPTIONS**
- **POSITIVE**: The Tell Us Why section is linked to the positive smileys in the scale so respondents can tell what was satisfactory.
- **NEGATIVE**: The Tell Us Why section is linked to the negative smileys in the scale so respondents can tell what was not satisfactory.
File Upload

You can upload information in file format to forms.

Figure 3-16  Example of File Upload.

**ALERT:** Security measures prevent executable files (.exe, etc.) from being uploaded.

**BENEFITS**
- Collect graphics, files
- Useful as a form collector (collect resumes)

**CAVEAT**
- Executable files may not be uploaded

**TYPICAL USES**
- Upload text, graphic, beta files
Timing

The timing question is very helpful in conducting experiments and tracking how long a respondent was on a page (Figure 3-17). The question is not displayed to respondents and does not prompt a response.

The timing question is valuable because you can see how long respondents were on a page to answer the questions or to look at a particular condition. You can see how long someone looks at an image or video and terminate them if they don’t view it long enough. You also have control over how long someone looks at a condition. For example, you can force respondents to remain on the page for a certain amount of time and not click right through to the next page, as well as specify an amount of time before automatically advancing the respondent to the next page of the survey. These are powerful tools at your disposal for monitoring the quality of your response data.

INFORMATION GATHERED BY TIMING QUESTION

- **FIRST CLICK**: Amount of time that passed before the respondent’s first click on page.
- **LAST CLICK**: Amount of time that passed before respondent’s last click on page before clicking the Next (>>) button.
- **PAGE SUBMIT**: Amount of time that passed before respondent clicked Submit/Next button on page.
- **CLICK COUNT**: Total amount of times respondent clicked on the page.
ADDITIONAL FUNCTIONALITY

- Seconds to disable submit: The amount of time in seconds the participant must wait before being able to click the Submit, or Next, button to move to the next page. The button will not show up until the time passes.
- Seconds to auto-advance: The amount of time in seconds before the participant is automatically moved to the next page of the survey.

Q - T I P

- The timer starts counting once the page finishes loading in the browser. The timing question type is actually a page timer and must be added to each page you’d like to time. If you want to time a specific question, separate the actual question along with the timing question onto one page.
- The timer collects time to the millisecond.
- Timing questions are not displayed to respondents, though it is shown under Survey Preview mode for testing purposes. Select “Do Not Show Hidden Questions” to not display in preview mode.
- Logic can be based off the timing question counts.
- Seconds to disable submit and Seconds to auto-advance can be used in conjunction with each other.

If you need to know how long it takes a respondent to answer a question, this option is for you. The timing question never appears to the respondent, but it tracks click information and timing for the page when you insert it.

BENEFITS

- Know timing statistics on any page

TYPICAL USES

- Add to questions when response time is critical
- Monitor response time to evaluate respondent quality (cheater and speeder identification)
Meta Info Question

The meta info question type collects information about the hardware and software accessing your survey (Figure 3-18). This is great for feedback surveys, especially on websites where it would be useful to know the operating system and web browser they use. This question type is not seen by the respondent.

**INFORMATION GATHERED BY THE META INFO QUESTION**

- **BROWSER**: Browser name (MSIE, Firefox, Chrome, Safari).
- **VERSION**: Version of the browser they’re running (like 8.0, 5.0.3).
- **OPERATING SYSTEM**: Specifies if running Windows or Mac, or another operating system (Windows NT 6.1, Intel Mac OS X 10_6_6).
- **SCREEN RESOLUTION**: Resolution of the respondent’s monitor (1920x1080).
- **FLASH VERSION**: Version of Adobe Flash running on the respondent’s machine. If Flash is not installed, a “-1” displays (like for the iPhone/iPad).
- **JAVA SUPPORT**: Shows if Java is installed on respondent’s machine. “1” means Java installed, “0” means it is not.
- **USER AGENT**: Every browser has a user agent string that tells a website what it is and typically what engine it is using to display its content.
**BENEFITS**
- Collects information without having to ask a question

**CAVEATS**
- Some users may object to this data being collected without their knowledge

**TYPICAL USES**
- Surveys about computer use

---

**Summary**

The Qualtrics Research Suite offers hundreds of different variations based on these fundamental question types. You can build virtually any type of question in Qualtrics. And, in addition, advanced users can add JavaScript to customize these question types even further.
Measurement and Scaling

Chapter 3 Note

Measurement is a way of assigning numbers to objects to represent the amounts or degrees of a property possessed by the objects. There are three characteristics or features of real number series measurement:

1. ORDER: Numbers are ordered.
2. DISTANCE: The differences that exist between the ordered numbers.
3. ORIGIN: The series has a unique origin indicated by the number zero.

A measurement scale allows the investigator to measure and compare the amounts and changes in the variable being measured. However, we measure the attributes or characteristics of objects, not the objects themselves.

Primary Types of Scales

Researchers prefer well-defined scales possessing a natural zero and constant unit of measurement. In the behavioral sciences (including marketing research), however, we must frequently settle for less-precise data. We can classify scales into four major categories: Nominal, Ordinal, Interval, and Ratio.

Each scale possesses its own set of underlying assumptions about order, distance, and origin, and how well the numbers correspond with real-world entities. As our rigor in conceptualizing concepts increases, we can upgrade our measurement scale. One example is the measurement of color. We may simply categorize colors (nominal scale), or we can measure the frequency of light waves (ratio scale).

The specification of scale is vital in all research. The type of measurement scale dictates the specific analytical (statistical) techniques that are most appropriate for use in analyzing the obtained data.

Table 1  Scales of Measurement
<table>
<thead>
<tr>
<th>SCALE</th>
<th>MATHEMATICAL GROUP STRUCTURE</th>
<th>PERMISSIBLE STATISTICS</th>
<th>TYPICAL ELEMENTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nominal</td>
<td>Permutation group y = f(x), where f(x) means any one-to-one correspondence</td>
<td>Mode Contingency Coefficient</td>
<td>Numbering of football players Assignment of type or model numbers to classes</td>
</tr>
<tr>
<td>Ordinal</td>
<td>Isotonic group y = f(x), where f(x) means any strictly increasing function</td>
<td>Median Percentile Order correlation Sign test; run test</td>
<td>Hardness of minerals Quality of leather, lumber Top 10 Lists Good-Better-Best</td>
</tr>
<tr>
<td>Interval</td>
<td>General linear group y = a+bx b &gt; 0</td>
<td>Mean Average deviation Standard deviation Product-moment correlation t-test, F-test</td>
<td>Temperature (Fahrenheit and centigrade) Energy Calendar dates Net Promoter Score Satisfaction Ratings</td>
</tr>
<tr>
<td>Ratio</td>
<td>Similarity group y = cx c &gt; 0</td>
<td>Geometric mean Harmonic mean Coefficient of variation</td>
<td>Length, width, density Pitch scale, loudness scale Price utility</td>
</tr>
</tbody>
</table>

**NOMINAL SCALES**

Nominal scales are the simplest. They support only the most basic analyses. A nominal scale serves only as a label or tag to identify objects, properties, or events. A nominal scale does not possess order, distance, or origin. For example, we can assign numbers to baseball players or classify supermarkets into categories that “carry our brand” versus those that “do not carry our brand.”

Using nominal scales, we can only count the stores that carry each brand in a product class and find the modal (highest number of mentions) brand carried. The usual statistical operations involving the calculations of means, standard deviations, etc. are not appropriate or meaningful for nominal scales.

**ORDINAL SCALES**

Ordinal scales are ranking scales and possess the characteristic of order only. These scales require us to distinguish between objects according to a single attribute and direction.
For example, when ranking a group of floor polish brands according to “cleaning ability,” we would assign the number 1 to the highest-ranking polish, 2 to the second-highest ranking polish, and so on. However, the mere ranking of brands does not quantify the differences separating brands with regard to cleaning ability. We do not know if the difference in cleaning ability between the brands ranked 1 and 2 is larger, less than, or equal to the difference between the brands ranked 2 and 3.

In dealing with ordinal scales, statistical description can employ positional measures such as the median, quartile, and percentile, or other summary statistics that deal with order among brands. As with the nominal scale, arithmetic averaging is not meaningful for ranked data.

**INTERVAL SCALES**

*Interval scales* permit us to make meaningful statements about the differences separating two objects. This type of scale possesses the properties of order and constant units of distance, but the zero point of the scale is arbitrary.

For example, an arbitrary zero is assigned to the Fahrenheit temperature scale and equal temperature differences equate to equal volumes of expansion in the liquid used in the thermometer. Therefore, it is not correct to state that any value on a specific interval scale is a multiple of another (50°F is not twice as hot as 25°F).

Most ordinary statistical measures (such as arithmetic mean, standard deviation, and correlation coefficient) require only interval scales for their computation.

**RATIO SCALES**

*Ratio scales* represent the elite of scales and contain all the information of lower-order scales and more. These scales, like length and weight, possess a unique zero point, equal intervals, and the ability to make ratio statements. All types of statistical operations can be performed on ratio scales.

An example of ratio-scale properties is that 3 yards is three times 1 yard.

**RELATIONSHIPS AMONG SCALES**

To provide some idea of the relationships among nominal, ordinal, interval, and ratio scales, marketing researchers who use descriptive statistics (arithmetic mean, standard deviation) and tests of significance (t-test, F-test) should require that the data are (at least) interval-scaled.

From a purely mathematical point of view, you can obviously do arithmetic with any set of numbers—and any scale. What is at issue is the interpretation and meaningfulness of the results. As we select more powerful measurement scales, our abilities to predict, explain, and otherwise understand respondent ratings also increase.
Chapter 4

50 Scales

Scales are the key to innovative survey research. Scales focus on what you are measuring: satisfaction, preference, importance, performance, loyalty and more.

Scale categories: Agreement, evaluation, preference, intention, satisfaction, and graphic.
The Beauty of Scales

Scales provide the measurement for survey research. Rather than asking respondents a basic yes or no question, scales measure the direction and intensity. Scales also fulfill the level of measurement required by your selected statistical analysis technique. This is critical for research.

Imagine the owner of a small-town retail store. She thinks she has a great relationship with all of her customers. In fact, she’d be surprised if more than 5% of her customers are dissatisfied with her store. But she wants to make sure.

She asks 100 customers if they are satisfied or dissatisfied with the store. She gets this breakdown:

What does this mean? How can she improve? Her strategy will depend upon how dissatisfied the customers are. For instance, a 75% satisfied rating could look like this:

Or, it could look like this:
These two charts paint completely different pictures of the store’s customer satisfaction, but an unscaled “Are you satisfied?” question with yes-no answer choices doesn’t reveal the answer.

That’s why researchers use scales for their studies. Not only can they run basic percentages like the ones above, they can also assign each option a value and find a mean, median, range, and variance. Means enable quick evaluations of results across multiple questions.

For example, the same store owner could use a 7-point Satisfied – Dissatisfied scale to ask about satisfaction with four attributes of her store.

- Prices
- Customer Service
- Location
- Hours

The scale points would be given the following labels:

![Satisfaction Scale](image)

She asks the questions, and she receives the following means:

![Satisfaction Chart](image)

A quick look at these results and we see that she has a problem related to customer service.

This is actionable data. It is much more useful than simple yes / no responses, and it enables her to improve customer service.
So what scales should you use for your study? There are dozens of options to pick from. In this chapter, we look at six general scale categories: agreement, evaluation, preference, intention, satisfaction, and graphic.

A GENERAL NOTE ON SCALE FORMAT

Many different scale formats (ways of presenting answers) have been tested and validated in the psychometric and marketing literature. Some of the most commonly used scales are known as the Likert scale (a 5 or 7 point balanced descriptive scale, named after Michigan Psychometrician Rensis Likert); the Semantic Differential Scale (a 7 point bi-polar scale developed by Illinois Psychologist Charles Osgood), and the Stapel Scale (a uni-polar -5 to +5 scale with no neutral zero point, developed by Jan Stapel of the Netherlands Institute of Public Opinion).

LIKERT SCALE

![Likert Scale Example]

OTHER OPTIONS

3 POINT SCALE

Dislike, Neither Like nor Dislike, Like

7 POINT SCALE

Dislike Extremely, Dislike Very Much, Dislike Somewhat, Neither Like nor Dislike, Like Somewhat, Like, Like Extremely

SEMANTIC DIFFERENTIAL SCALE

![Semantic Differential Scale Example]
OTHER OPTIONS

3 POINT SCALE

Boring, Neither Boring nor Exciting, Exciting

7 POINT SCALE

Extremely Boring, Boring, Slightly Boring, Neither Boring nor Exciting, Slightly Exciting, Exciting, Extremely Exciting

STAPEL SCALE

Stapel Scale is like a semantic differential scale, but with no middle point. The Staple scale is often set up as a vertical scale with a single legend in the middle.

When thinking about Brand X hamburgers, how would you describe the level of food quality?

-5 -4 -3 -2 -1 +1 +2 +3 +4 +5

OTHER OPTIONS

3 POINT SCALE

Low Quality, Average Quality, High Quality

7 POINT SCALE

Extremely Low Quality, Low Quality, Somewhat Low Quality, Average Quality, Somewhat High Quality, High Quality, Extremely High Quality

The following sections show many standard answer formats.

Don’t like ours? You can quickly and easily create your own. We don’t have a monopoly on survey scales, but we do like to think we know a little bit about measurement and scaling, and we want to share part of the Qualtrics scale library with you.
SATISFACTION SCALES

How would you rate the quality of care you received at Mt. Sinai Hospital?

- Poor
- Fair
- Good
- Very Good
- Excellent

OTHER OPTIONS

3 POINT SCALE
- Poor, Good, Excellent

7 POINT SCALE
- Extremely Poor, Poor, Fair, Neutral, Good, Very Good, Excellent

AGREEMENT SCALES

DISAGREE – AGREE

Agree - Disagree scales are most often used with attitude statements or factual type statements:
The NY Giants are my favorite NFL team.

- Strongly Disagree
- Disagree
- Neither Agree Nor Disagree
- Agree
- Strongly Agree

OTHER OPTIONS

3 POINT SCALE
- Disagree, Neither Agree Nor Disagree, Agree

7 POINT SCALE
- Strongly Disagree, Disagree, Somewhat Disagree, Neither Agree Nor Disagree, Somewhat Agree, Agree,
- Strongly Agree
DESCRIPTIVENESS

Descriptiveness of a concept can be measured using a single item Matrix Question with scale end-point labels and numbers.

Thinking about the [BRAND], how descriptive are each of the following items?

<table>
<thead>
<tr>
<th>Exciting</th>
<th>Not at all Descriptive</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>Extremely Descriptive</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

OTHER OPTIONS

3 POINT SCALE

Not at all Descriptive, Neutral, Extremely Descriptive

5 POINT SCALE

Very Undescriptive, Somewhat Undescriptive, Neither Undescriptive Nor Descriptive, Somewhat Descriptive, Very Descriptive

DESCRIBE MY FEELINGS

A single item Matrix Question can be set up with a Likert scale (each scale point labeled)

Thinking about the [BRAND], how descriptive are each of the following items?

<table>
<thead>
<tr>
<th>Exciting</th>
<th>Clearly Does Not Describe my Feelings</th>
<th>1</th>
<th>Mostly Does Not Describe my Feelings</th>
<th>2</th>
<th>Somewhat Describes my Feelings</th>
<th>3</th>
<th>Mostly Describes my Feelings</th>
<th>4</th>
<th>Clearly Describes my Feelings</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

OTHER OPTIONS

3 POINT SCALE

Does Not Describe My Feelings, Somewhat Describes My Feelings, Describes My Feelings

7 POINT SCALE

**JUST LIKE ME**

"Just Like Me - Not at All Like Me" scales are often used for Psychographic measures

<table>
<thead>
<tr>
<th></th>
<th>Not at All Like Me</th>
<th>Not Like Me</th>
<th>Unsure</th>
<th>Like Me</th>
<th>Just Like Me</th>
</tr>
</thead>
<tbody>
<tr>
<td>I enjoy the excitement of shopping at my local retail stores</td>
<td>⊗</td>
<td>⊗</td>
<td>⊗</td>
<td>⊗</td>
<td>⊗</td>
</tr>
<tr>
<td>I rarely shop online</td>
<td>⊗</td>
<td>⊗</td>
<td>⊗</td>
<td>⊗</td>
<td>⊗</td>
</tr>
</tbody>
</table>

**OTHER OPTIONS**

3 POINT SCALE

Not Like Me, Somewhat Like Me, Just Like Me

7 POINT SCALE

Not at All Like Me, Not a Lot Like Me, Somewhat Not Like Me, Neutral, Somewhat Like Me, A Lot Like Me, Just Like Me

**TRUE – FALSE**

Dichotomous True - False questions can be stretched to show degree.

True or False: Dark chocolate is very good for your health

<table>
<thead>
<tr>
<th></th>
<th>Definitely False</th>
<th>Probably False</th>
<th>Neither True Nor False</th>
<th>Probably True</th>
<th>Definitely True</th>
</tr>
</thead>
<tbody>
<tr>
<td>I enjoy the excitement of shopping at my local retail stores</td>
<td>⊗</td>
<td>⊗</td>
<td>⊗</td>
<td>⊗</td>
<td>⊗</td>
</tr>
</tbody>
</table>

**OTHER OPTIONS**

3 POINT SCALE

False, Neither True Nor False, True

7 POINT SCALE

Definitely False, Most Likely False, Probably False, Neither True Nor False, Probably True, Most Likely True, Definitely True
**NO – YES**

Yes - No questions can be stretched to show degree.

The rules of society are much different today than they were years ago. Have you ever done something that might be considered to be a felony in today's world?

<p>| | | | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Definitely Not</td>
<td>○</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Probably Not</td>
<td>○</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Unsure</td>
<td>○</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Probably Yes</td>
<td>○</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Definitely Yes</td>
<td>○</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**OTHER OPTIONS**

**3 POINT SCALE**

No, Unsure, Yes
EVALUATION SCALES

NOT IMPORTANT – IMPORTANT

<table>
<thead>
<tr>
<th></th>
<th>Not at all Important</th>
<th>Very Unimportant</th>
<th>Neither Important nor Unimportant</th>
<th>Very Important</th>
<th>Extremely Important</th>
</tr>
</thead>
<tbody>
<tr>
<td>Has a value meal menu</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Cleanliness of the restaurant</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

OTHER OPTIONS

3 POINT SCALE

Not Important, Neither Important nor Unimportant, Important

7 POINT SCALE

Not at all Important, Very Unimportant, Somewhat Unimportant, Neither Important nor Unimportant, Somewhat Important, Important, Extremely Important

RELATIVE IMPORTANCE (CONSTANT SUM)

Constant sum scales are used to show relative standing. In this case 100 points are allocated to show relative importance. This type of question produces ratio data (Origin value of 0 and equal interval measurement), and is often used in conjoint analysis.

Below are your most preferred levels for the three attributes you used to select a riding lawnmower. Please allocate 100 points between the three attributes to show how you judge the importance of each. The total must sum to 100.

- Speed: 10 mph
  - Points: 29
- Engine: Kohler
  - Points: 30
- Mower Deck Size 54"
  - Points: 41

Total: 100
CONFIDENCE IN A DECISION

Attitudes are believed by some to have direction (favorable or unfavorable), degree (how favorable or how unfavorable), and intensity (how confident or strongly they feel about the evaluation). The following is an intensity question:

How confident are you right now that your product choice is correct?

<table>
<thead>
<tr>
<th>Very Unconfident 1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>Very Confident 5</th>
</tr>
</thead>
</table>

OTHER OPTIONS

3 POINT SCALE

Not At All Confident, Somewhat Confident, Very Confident

5 POINT SCALE

Not At All Confident, Only Slightly Confident, Somewhat Confident, Moderately Confident, Very Confident

DISLIKE – LIKE

The following evaluation question measures both direction (favorable or unfavorable) and degree (how favorable or how unfavorable).

How much do you like Canyon View Farms dairy products?

<table>
<thead>
<tr>
<th>Dislike Extremely</th>
<th>Dislike Very Much</th>
<th>Neither Like nor Dislike</th>
<th>Like Very Much</th>
<th>Like Extremely</th>
</tr>
</thead>
</table>

OTHER OPTIONS

3 POINT SCALE

Dislike, Neither Like nor Dislike, Like

7 POINT SCALE

Dislike Extremely, Dislike Very Much, Dislike Somewhat, Neither Like nor Dislike, Like Somewhat, Like, Like Extremely
POOR – EXCELLENT

How would you rate the quality of care you received at Mt. Sinai Hospital?

Very Poor  ○  Poor  ○  Fair  ○  Good  ○  Very Good  ○

OTHER OPTIONS

3 POINT SCALE

Poor, Good, Excellent

7 POINT SCALE

Extremely Poor, Poor, Fair, Neutral, Good, Very Good, Excellent

MEETS YOUR EXPECTATIONS

Please tell us about the cleanliness of the waiting area

Far Short of Your Expectations  ○  Short of Your Expectations  ○  Met Your Expectations  ○  Exceeded Your Expectations  ○  Far Exceeded Your Expectations  ○

OTHER OPTIONS

3 POINT SCALE

Fell Short of Your Expectations, Met Your Expectations, Far Exceeded Your Expectations

7 POINT SCALE

Far Short of Your Expectations, Short of Your Expectations, Somewhat Short of Your Expectations, Neither Fell Short nor Met Your Expectations, Somewhat Met Your Expectations, Met Your Expectations, Far Exceeded Your Expectations

BETTER – WORSE

How well does the TASTE of “5 Guys” french fries compare with those of the competition?

Much Worse  ○  Worse  ○  About the Same  ○  Better  ○  Much Better  ○
OTHER OPTIONS

3 POINT SCALE

Worse, About the Same, Better

7 POINT SCALE

Much Worse, Worse, Somewhat Worse, About the Same, Somewhat Better, Better, Much Better

LIKE MY IDEAL

Compared with the ideal, how would you rate 5 Guys french fries?

NOT AT ALL LIKE MY IDEAL Not like my ideal Neutral Like my ideal Just like my ideal

OTHER OPTIONS

3 POINT SCALE

Not Like My Ideal, Neutral, Like my Ideal

7 POINT SCALE

Not at all Like My Ideal, Not Like My Ideal, Somewhat Not Like My Ideal, Neutral, Somewhat Like My Ideal, Like My Ideal, Just Like My Ideal

INAPPROPRIATE – APPROPRIATE

Thinking about serving Clamato as a beverage for a new year’s eve party, would you consider this choice to be...

Very Inappropriate Inappropriate Neutral Appropriate Very Appropriate

OTHER OPTIONS

3 POINT SCALE

Inappropriate, Neutral, Appropriate

7 POINT SCALE

Very Inappropriate, Inappropriate, Somewhat Inappropriate, Neutral, Somewhat Appropriate, Appropriate, Very Appropriate
### BELOW AVERAGE - ABOVE AVERAGE

Based on your recent experience, how would you rate the performance of the returns department at Mountainland Supply?

<table>
<thead>
<tr>
<th>Far Below Average</th>
<th>Below Average</th>
<th>Average</th>
<th>Above Average</th>
<th>Far Above Average</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

#### OTHER OPTIONS

**3 POINT SCALE**

*Below Average, Average, Above Average*

**7 POINT SCALE**

*Far Below Average, Below Average, Slightly Below Average, Average, Slightly Above Average, Above Average, Far Above Average*

### DIFFICULT – EASY

Would you consider the returns process to be...

<table>
<thead>
<tr>
<th>Very Difficult</th>
<th>Difficult</th>
<th>Normal</th>
<th>Easy</th>
<th>Very Easy</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

#### OTHER OPTIONS

**3 POINT SCALE**

*Difficult, Normal, Easy*

**7 POINT SCALE**

*Very Difficult, Difficult, Somewhat Difficult, Normal, Somewhat Easy, Easy, Very Easy*

### MUCH WORSE – MUCH BETTER

How well does the TASTE of "5 Guys" french fries compare with those of the competition?

<table>
<thead>
<tr>
<th>Much Worse</th>
<th>Worse</th>
<th>About the Same</th>
<th>Better</th>
<th>Much Better</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
OTHER OPTIONS

3 POINT SCALE
Worse, About the Same, Better

7 POINT SCALE
Much Worse, Worse, Slightly Worse, About the Same, Slightly Better, Better, Much Better

INEFFECTIVE – EFFECTIVE

How effective are the changes in speeding your time to startup?

Very Ineffective
Ineffective
Neither Effective nor Ineffective
Effective
Very Effective

OTHER OPTIONS

3 POINT SCALE
Ineffective, Neither Effective nor Ineffective, Effective

7 POINT SCALE
Very Ineffective, Ineffective, Somewhat Ineffective, Neither Effective nor Ineffective, Somewhat Effective, Effective, Very Effective

BAD – GOOD

How would you rate the quality of the information you received from the knowledge base?

Very Bad
Bad
Neither Good nor Bad
Good
Very Good

OTHER OPTIONS

3 POINT SCALE
Bad, Neither Good nor Bad, Good

7 POINT SCALE
Very Bad, Bad, Somewhat Bad, Neither Good nor Bad, Somewhat Good, Good, Very Good
**SLOW - FAST**

Would you rate the speed of access to the knowledge base?

- **Very Slow**
- **Slow**
- **OK**
- **Fast**
- **Very Fast**

**OTHER OPTIONS**

**3 POINT SCALE**

Slow, OK, Fast

**7 POINT SCALE**

Very Slow, Slow, Somewhat Slow, OK, Somewhat Fast, Fast, Very Fast

**USELESS - USEFUL**

How useful was our online knowledge base in solving your problem?

- **Very Useless**
- **Useless**
- **Neutral**
- **Useful**
- **Very Useful**

**OTHER OPTIONS**

**3 POINT SCALE**

Useless, Neutral, Useful

**7 POINT SCALE**

Totally Useless, Useless, Somewhat Useless, Neutral, Somewhat Useful, Useful, Extremely Useful
PREFERENCE SCALES

Preference scales are frequently used in brand positioning, market share, and conjoint analysis studies. You can measure preference as an overall construct, for brands, or for attributes. Questions can be worded to evaluate degree of preference for single objects or for multiple objects.

NO PREFERENCE – STRONGLY PREFER

Overall preference development in a brand category

In thinking about your purchases of Ice Cream Brands, how strongly do you prefer any single brand?

No Preference  Slightly Prefer  Prefer  Strongly Prefer  Very Strongly Prefer

OTHER OPTIONS

3 POINT SCALE

No Preference, Prefer, Very Strongly Prefer

PREFER A – PREFER B

Relative preference for two brands

Considering brands "Alpha" and "Beta", which do you prefer?

Strongly Prefer Alpha  Slightly Prefer Alpha  No Preference  Slightly Prefer Beta  Strongly Prefer Beta

OTHER OPTIONS

3 POINT SCALE

Prefer Alpha, No Preference, Prefer Beta

7 POINT SCALE

Strongly Prefer Alpha, Moderately Prefer Alpha, Slightly Prefer Alpha, No Preference, Slightly Prefer Beta, Moderately Prefer Beta, Strongly Prefer Beta
Preference evaluation for logos based on attributes

For these two logos... Which is best on each of the following characteristics?

<table>
<thead>
<tr>
<th>Ati</th>
<th>Ati</th>
</tr>
</thead>
<tbody>
<tr>
<td>Strongly Prefer</td>
<td>5</td>
</tr>
<tr>
<td>4</td>
<td>3</td>
</tr>
<tr>
<td>Easy to Read</td>
<td>○</td>
</tr>
<tr>
<td>Appears Powerful</td>
<td>○</td>
</tr>
<tr>
<td>Indicates Quality</td>
<td>○</td>
</tr>
</tbody>
</table>

OTHER OPTIONS

3 POINT SCALE

Prefer Alpha, No Preference, Prefer Beta

7 POINT SCALE

Strongly Prefer Alpha, Prefer Alpha, Slightly Prefer Alpha, No Preference, Slightly Prefer Beta, Prefer Beta, Strongly Prefer Beta

AVOID – PREFER

Preference based on an attribute

If you were considering a high protein diet, like the Atkins diet, would you prefer red meat as the primary source of protein?

<table>
<thead>
<tr>
<th>Strongly Avoid Red Meat</th>
<th>Avoid Red Meat</th>
<th>Indifferent</th>
<th>Slightly Prefer Red Meat</th>
<th>Strongly Prefer Red Meat</th>
</tr>
</thead>
<tbody>
<tr>
<td>○</td>
<td>○</td>
<td>○</td>
<td>○</td>
<td>○</td>
</tr>
</tbody>
</table>

OTHER OPTIONS

3 POINT SCALE

Avoid Red Meat, Indifferent, Prefer Red Meat

7 POINT SCALE

INTENTION SCALES

Intentions refer to future action, and are most often used to measure likelihood of future purchases or to measure customer loyalty (Net Promoter Score).

DEFINITELY WILL NOT – DEFINITELY WILL

OTHER OPTIONS

3 POINT SCALE

Will Not, Might or Might Not, Will

7 POINT SCALE

Definitely Will Not, Will Not, Probably Will Not, Might or Might Not, Probably Will, Will, Definitely Will

VERY UNLIKELY – VERY LIKELY

OTHER OPTIONS

3 POINT SCALE

Unlikely, Undecided, Likely

7 POINT SCALE

Very Unlikely, Unlikely, Somewhat Unlikely, Undecided, Somewhat Likely, Likely, Very Likely
MUCH LESS – MUCH MORE

Intention Quantity
How will your FUTURE USE of [BRAND] compare to your use today?

Much Less ☐  Less ☐  The Same ☐  More ☐  Much More ☐

OTHER OPTIONS

3 POINT SCALE
Less, The Same, More

7 POINT SCALE
Much Less, Less, Slightly Less, The Same, Slightly More, More, Much More

NOT AT ALL CERTAIN – COMPLETELY CERTAIN

Certainty of Ability to Perform
I am knowledgeable enough to fix minor problems with my computer

Not at All Certain ☐  Somewhat Certain ☐  Moderately Certain ☐  Very Certain ☐  Completely Certain ☐

OTHER OPTIONS

3 POINT SCALE
Not Certain, Moderately Certain, Certain

7 POINT SCALE
Not at All Certain, Not Certain, Somewhat Certain, Moderately Certain, Somewhat Certain, Certain,
Completely Certain
NEVER REGRETTED – OFTEN REGRETTED

Regret is related to intention to repurchase, as well as satisfaction.

How often have you had REGRETS about your decision to [DESCRIBE ACTION, PRODUCT PURCHASE OR DECISION]?

Never Regretted  Rarely Regretted  Sometimes Regretted  Often Regretted  Very Often Regretted

OTHER OPTIONS

3 POINT SCALE

Never Regretted, Sometimes Regretted, Very Often Regretted

7 POINT SCALE

Never Regretted, Rarely Regretted, Sometimes Regretted, Often Regretted, Regretted,
Very Often Regretted, Always Regretted

UNBELIEVABLE – BELIEVABLE

Believable is an important part of intention to purchase a new concept. Four dimensions are typically measured in these concept tests: Believable, Personal Relevance, Perceived Uniqueness and Perceived Value.

How believable is the following new product claim:

This new Anti-Aging cream modifies your skin’s genetic markers to change how you appear to age. With continued use, you will actually appear younger

Unbelievable  Somewhat Unbelievable  Not Sure  Somewhat Believable  Believable

OTHER OPTIONS

3 POINT SCALE

Unbelievable, Not Sure, Believable

7 POINT SCALE

Extremely Unbelievable, Unbelievable, Somewhat Unbelievable, Not Sure, Somewhat Believable,
Believable, Extremely Believable
NEVER – VERY OFTEN (FREQUENCY)

Intention as an Expectation
In the future, how often do you expect to use this product?

Never [ ] Rarely [ ] Sometimes [ ] Quite Often [ ] Very Often [ ]

OTHER OPTIONS

3 POINT SCALE
Never, Sometimes, Often

7 POINT SCALE
Absolutely Never, Almost Never, Rarely, Sometimes, Often, Very Often, All the Time

NEVER – ALWAYS (FREQUENCY)

Intention as an Expectation (alternate scaling)
In the future, how often do you expect to use this product?

Never [ ] Occasionally [ ] Frequently [ ] Usually [ ] Always [ ]

OTHER OPTIONS

3 POINT SCALE
Never, Frequently, Always

7 POINT SCALE
Never, Almost Never, Occasionally, Frequently, Usually, Almost Always, Always
### NEVER – EVERY DAY (CALENDAR)

<table>
<thead>
<tr>
<th>Intention as an Expectation (alternate scaling)</th>
</tr>
</thead>
<tbody>
<tr>
<td>In the future, how often do you expect to use this product?</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Never</th>
<th>Less than Once a Month</th>
<th>Once a Month</th>
<th>Once a Week</th>
<th>Every Day</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### OTHER OPTIONS

**3 POINT SCALE**

- Never, Once a Month, Every Day

**7 POINT SCALE**

- Never, Less than Once a Month, Once a Month, More Than Once a Month, Once a Week, More Than Once a Week, Every Day
SATISFACTION SCALES

Customer satisfaction is the most common of all market research studies. You can measure satisfaction using a number of different scale types, including satisfaction, pleasure, happiness, and confirmation of expectations.

VERY DISATISFIED - VERY SATISFIED

3 POINT SCALE
- Dissatisfied, Neutral, Satisfied

5 POINT SCALE
- Very Dissatisfied, Dissatisfied, Neutral, Satisfied, Very Satisfied

DISPLEASED – PLEASED

3 POINT SCALE
- Displeased, Neutral, Pleased

7 POINT SCALE
- Very Displeased, Displeased, Somewhat Displeased, Neutral, Somewhat Pleased, Pleased, Very Pleased
UNHAPPY – HAPPY

Overall, how happy are you with the treatment you received from the XYZ service department?

Very Unhappy
Unhappy
Neither Happy nor Unhappy
Happy
Very Happy

OTHER OPTIONS

3 POINT SCALE

Unhappy, Neither Happy nor Unhappy

7 POINT SCALE

Very Unhappy, Unhappy, Somewhat Unhappy, Neither Happy nor Unhappy, Somewhat Happy, Happy, Very Happy

SHORT OF EXPECTATIONS – EXCEEDED EXPECTATIONS

General Expectations (Subjective)

How well have the BC Lions met your expectations this year?

Far Short of My Expectations
Short of My Expectations
Met My Expectations
Exceeded My Expectations
Far Exceeded My Expectations

OTHER OPTIONS

3 POINT SCALE

Short of My Expectations, Met My Expectations, Exceeded My Expectations

7 POINT SCALE

Far Short of My Expectations, Short of My Expectations, Slightly Short of My Expectations, Met My Expectations, Slightly Exceeded My Expectations, Exceeded My Expectations, Far Exceeded My Expectations
WORSE – BETTER

Expectations can be measured relative to another product or brand (usually the market leader).

How well does the taste of "5 Guys" french fries compare with those from McDonalds? Would you say that 5 Guys is...

Much Worse  ○  Worse  ○  About the Same  ○  Better  ○  Much Better  ○

OTHER OPTIONS

3 POINT SCALE

Worse, About the Same, Better

7 POINT SCALE

Much Worse, Worse, Slightly Worse, About the Same, Slightly Better, Better, Much Better

POOR – GOOD

44. Expectations can be measured relative to an "ideal point"

Ideal point comparisons and measurements are an important part of measurement and scaling. The comparison to an ideal can be part of the question, or part of the actual scale.

Compared with the ideal, how would you rate 5 Guys french fries?

Very Poor  ○  Poor  ○  Fair  ○  Good  ○  Very Good  ○

OTHER OPTIONS

3 POINT SCALE

Poor, Fair, Good

7 POINT SCALE

Very Poor, Poor, Somewhat Poor, Fair, Somewhat Good, Good, Very Good
NOT LIKE MY IDEAL – LIKE MY IDEAL

Compared with the ideal, how would you rate 5 Guys french fries?

3 POINT SCALE
Not Like My Ideal, Neutral, Like My Ideal

7 POINT SCALE
Not at All Like My Ideal, Not Like My Ideal, Somewhat Unlike My Ideal, Neutral, Somewhat Like My Ideal, Like My Ideal, Just Like My Ideal

OTHER OPTIONS

TERRIBLE – DELIGHTFUL

The terrible - delightful scale is used to stretch the ends of the scale beyond the commonly used endpoints of unsatisfactory and excellent.

How would you rate your last service experience with Mister B’s Bargain Basement?

3 POINT SCALE
Terrible, Satisfactory, Delightful

7 POINT SCALE
Terrible, Very Unsatisfactory Unsatisfactory, Satisfactory, Very Satisfactory, Excellent, Delightful
DIFFERENT – SIMILAR

Thinking of the various types and brands of this product available in the market today, are they more alike or different?

- They Are All Different
- They Are All the Same

OTHER OPTIONS

3 POINT SCALE
- They Are All Different, Neither Different Nor the Same, They Are All the Same

7 POINT SCALE
- They Are All Extremely Different, They Are All Different, They Are All Slightly Different, Neither Different Nor the Same, They Are All Slightly the Same, They Are All the Same, They Are All Very the Same
GRAPHIC SCALES

There are more than 750 graphic scale images in the Qualtrics graphics library that include ladder, thermometer, pizza, stars, and numeric graphic images in a variety of colors. You can also upload your own scale graphics into your personal graphics library.

For those who cannot read, a graphic may be sufficient. Text interpretations of the smiley face are supplied below only as an interpretive note to researchers.

DON’T LIKE AT ALL – LIKE A LOT

Source: disneydvd.disney.go.com/finding-nemo.html

How was our service today?

Didn’t Like at All Liked a Little Bit So-So Liked Somewhat Liked a Whole Lot

1 2 3 4 5
OTHER OPTIONS

3 POINT SCALE

Don’t Like, Like a Little, Like a Lot

7 POINT SCALE

Don’t Like At All, Don’t Like Much, Don’t Like a Little, Neutral, Like Some, Like, Like a Lot

TERRIBLE — GREAT

How was our service today?

<p>| | | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>

</tbody>
</table>

OTHER OPTIONS

3 POINT SCALE

Terrible, So-So, Great

7 POINT SCALE

Extremely Terrible, Terrible, A Little Bit Terrible, So-So, A Little Bit Great, Great, Extremely Great

Summary

With Qualtrics, you can create custom scales that are exciting and just right for what you are measuring. For more common scales, the automatic scaling option will greatly speed question building.
Advanced Ordinal Measurement Methods

A variety of ordinal measurement methods exist for collecting data:
- Paired comparisons
- Ranking procedures
- Ordered-category sorting
- Rating techniques

**PAIRED COMPARISONS**

As the name suggests, paired comparisons require the respondent to choose one of a pair of stimuli that “has more of,” “dominates,” “precedes,” “wins over,” or “exceeds” the other with respect to some designated property of interest. For example, six laundry detergent brands are to be compared for their “sudsiness.” Respondents are asked which one of each pair of brands has the most sudsiness. The full set of 15 paired comparisons would be considered \((n \times n - 1)/2 = (6 \times 5) / 2 = 15\) if order of presentation is not considered.

A sample question format for paired comparisons is shown below. The order of presentation of the pairs, including which item of a pair is shown first, should be pre-determined, or can be presented randomly.
RATING TECHNIQUES

Rating typically involves having respondents place the item being rated (a person, object, or concept) along a continuum or in one of an ordered set of categories. Ratings allow respondents to designate a degree or an amount of a characteristic or attribute as a point on a scale. Rating is one of the most popular and easily applied data collection methods and is used in a variety of scaling approaches, such as the semantic differential and the Likert summated scale.

Comparative Example:
Please rate today’s flight attendants compared to flight attendants on other airlines on each of the following items:

<table>
<thead>
<tr>
<th></th>
<th>Poor Among the Worst</th>
<th>Fair Not as Good as Most</th>
<th>Good About the Same as Most</th>
<th>Very Good Better than Most</th>
<th>Excellent Among the Best</th>
</tr>
</thead>
<tbody>
<tr>
<td>Courtesy / Friendliness</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Assistance in cabin before departure</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Responsiveness to your needs</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Ratings are easier and faster to administer and are analyzed as if they are interval-scaled. But, there is a risk when respondents end-pile their ratings toward the positive end of the scale. This typically happens when respondents evaluate positive constructs, such as values, that have little differentiability. The effect is to reduce the variance of the items being rated and the ability to detect relationships with other variables.

One alternative is to introduce a two-step evaluation process. Respondents first pick their most and least important values (attributes or factors) and rate them. Then, the remaining values are rated. This procedure is used in self-explicated conjoint models and, as shown by McCarty and Shrum (2000), reduces the level of end-piling and increases the differentiation of values ratings, both in terms of dispersion and the number of different rating points used.

Respondents differ in their use of a rating scale. One person’s rating of 9 or 10 may be equal to another’s 7 or 8. Semon
(1999) suggests that one way to find the real difference in perception or attitude is to ask each respondent three questions at the start of an interview:

1. On this scale, how do you rate the brand you now use or that you know best?
2. How do you rate the best brand you know about?
3. What rating represents the minimum acceptable level?

Questions such as these are often asked in product and brand studies to interpret ratings and provide anchor points for a respondent’s ratings. We can standardize a respondent’s actual ratings by using one or more of these anchors to produce “real-meaning relative ratings.”

Rating scale construction, when not treated as a serious task, is prone to create measurement error. Table 1 identifies nine issues that should be addressed when constructing a scale.

Table 1 Issues in Constructing a Rating Scales

</table>

Some research on these questions suggests including a neutral option unless the researcher has a compelling reason not to do so (e.g., all respondents can be expected to have a non-neutral attitude, as in a survey of voters). Expected voting in a survey of voters is an example.

_Balance_ refers to having an equal numbers of negative and positive response alternatives. When using importance scales for attributes, importance is not a bipolar concept. Importance ranges from none to some positive number. It is not a negative amount. Although this argument has conceptual appeal, researchers continue to use mid-points—specified or implied, in their construction of importance scales.

Answers to questions such as these will vary according to the researcher’s approach, and the problem being studied. The effects of research design on the reliability and validity of rating scales are discussed in two excellent review papers (Churchill and Peter, 1984; Peter and Churchill, 1986).
Advanced Interval/Ratio Procedures

Direct-judgment estimates, fractionation, constant sum, and rating methods that assume more than ordinal properties about respondents’ judgments are all variants of interval/ratio procedures or metric measurement methods.

DIRECT-JUDGMENT METHODS

In direct-judgment methods, respondents are asked to give a numerical rating to each stimulus with respect to some designated attribute. In the case of continuous rating scales, respondents are free to choose their own number along some line that represents their judgment about the magnitude of the stimulus relative to some reference points. These continuous scales work effectively in a semantic differential context (discussed later in this chapter) and appear to be insensitive to fluctuations in the length of the line used (Figure 1a).

The limited-response category sub case, illustrated by Figure 1b, is a straight rating procedure, with the important addition that the ratings, depending on the application, are now treated as either interval- or ratio-scaled data.

Figure 3 Sample Interval-Ratio Scale
FRACTIONATION

Fractionation (Figure 1c) is a procedure in which the respondent is given two stimuli at a time (e.g., a standard laundry detergent and a test brand) and asked to give some numerical estimate of the ratio between them, with respect to some attribute, such as sudsiness. Respondents may answer that the test brand, in their judgment, is three-fourths as sudsy as the standard. Later, either a new test brand is compared with the same standard, and so on, until all the test items are judged, or the same brands can be tested on a new attribute.

CONSTANT SUM

Constant-sum methods have become quite popular in marketing research, primarily because of their simplicity and ability to collect ratio data. In constant-sum methods, respondents are given some number of points—typically 10 or 100—and asked to distribute them over some set of stimuli or attribute alternatives in a way that reflects their relative importance or magnitude (Figure 1d). Constant sum forces respondents to make comparative evaluations across the stimuli and effectively standardizes each scale across persons, since all scores must add up to the same constant.

The Semantic Differential

The semantic differential (Osgood, Suci, & Tannenbaum, 1957) is a ratings procedure that results in assumed interval scales that are often further analyzed by such techniques as factor analysis (see Basic Marketing Research: Analysis and Reporting).

The semantic differential procedure permits the researcher to measure the direction and the intensity of respondents’ attitudes (i.e., measure psychological meaning) toward such concepts as advertising, brand, or service image. As shown in Figure 2, this scale uses antonym pairs, the extremes of each pair being separated by seven intervals that are assumed to be equal. For each pair of bipolar adjectives (e.g., powerful/weak), the respondent is asked to judge the concept along the seven-point scale with implicit descriptive phrases.

In practice, many more bipolar adjectives would be used than are given in this example. By assigning a set of integer
values such as +3, +2, +1, 0, –1, –2, –3 to the seven points on the bipolar scale, we can quantify the responses under the assumption of equal-appearing intervals. We can then average these scale values, in turn, across respondents to develop semantic differential profiles (Figure 5).

Figure 5  Average-Respondent Profile Comparisons of Companies X and Y

In marketing research applications, the semantic differential often uses bipolar descriptive phrases in addition to simple adjectives. These phrases are developed for particular context areas, providing more meaning to respondents, thus leading to a high degree of reliability.

The semantic differential technique is appropriate for use in a variety of applications:
• Comparing corporate images, both among suppliers of particular products and against an ideal image of what respondents think a company should be.
• Comparing brands and services of competing suppliers.
• Determining the attitudinal characteristics of purchasers of particular product classes or brands within a product class, including perceptions of the country of origin for imported products.
• Analyzing the effectiveness of advertising and other promotional stimuli toward changing attitudes.

The widespread use of the semantic differential is evidence of a convenient and reasonably reliable way for scaling stimuli (scaling attributes of brands, corporations, services, etc.), and developing profiles of consumer/buyer attitudes on a wide variety of topics.

A CONCLUDING REMARK ABOUT SCALING STIMULI

The problems associated with interval-ratio scaling methods include the following:
1. Respondents’ subjective scale units may differ across each other, across testing occasions, or both.
2. Respondents’ subjective origins (zero points) may differ across each other, across occasions, or both.
3. Unit and origin may shift over stimulus items within a single occasion.
4. Subjective distance between stimuli may not equal a respondent’s perception of the distance on the scale.

These problems should not be treated lightly, but considered in the design of the question and scale points. Most ratings measurement methods are easy to apply. Moreover, little additional work beyond averaging is required to obtain the unit of measurement directly. Indeed, if a unique origin can be established (e.g., a zero level of the property), then the researcher obtains both an absolute origin and a measurement unit. As such, a subjective ratio scale is obtained.
Techniques for Scaling Respondents

In contrast to the approaches for scaling stimuli (attributes) just discussed, researchers have also developed techniques for scaling respondents along an attitude continuum of interest. Two better-known procedures for doing this are the summated scale and the Q-sort technique.

The Summated Scale

The summated scale assumes that the researcher wants to scale a characteristic, such as the public’s attitude toward travel and vacations. To illustrate, a set of seven statements regarding travel and vacations used in a study by a travel company are shown in Figure 4. Each of the seven test items has been classified as “favorable” (items 1, 3, and 7) or “unfavorable” (items 2, 4, 5, and 6). Subjects were asked to indicate their agreement with the statement. For items scaled items 2, 4, 5, and 6, we reversed these negatively scaled values so as to maintain a consistent direction (+2 would stand for “strongly disagree” and so on).

Suppose that a respondent evaluated the seven items such that they received a total score of:
\[ +2 +1 +1 +2 +1 +2 +2 = 11 \]

Suppose that another respondent responded to the same seven items by marking:
\[ -2 +0 -1 -2 -2 +0 = -9 \]

The second respondent has a less-favorable attitude regarding travel and vacations (by merit of a lower score). However, as indicated earlier, a given total score represents a different response pattern and may have a different meaning.

Figure 4  A Direction-Intensity Scale Measuring Attitudes Toward Travel and Vacations
In applying the Likert summated-scale technique, the steps shown in Table 2 are typically followed.

**Table 2  Steps in Constructing a Likert Summated Scale**

1. The researcher assembles a large number (75 to 100) of statements concerning the public’s sentiments toward travel and vacations. The question should be stated as a directional question of the form: “Traveling gives me a lot of pleasure… [strongly agree, agree, neither agree nor disagree, disagree, strongly disagree].”

2. Each of the test items is classified by the researcher as generally “favorable” or “unfavorable” to the attitude under study. A pretest is conducted that involves the full set of statements and a limited sample of respondents.

3. In the pretest the respondent indicates agreement/approval (or not) with every item, checking one of the following direction-intensity descriptors:

4. Each response is given a numerical value (e.g., +2, +1, 0, −1, −2, or +1 to +5)

5. The individual’s total-attitude score is represented by the algebraic summation of values associated with the items checked. Values are assigned such that the direction of attitude—favorable to unfavorable—is consistent over items. For example, if a +2 were assigned to “strongly approve/agree” for favorable items, a - 2 should be assigned to “strongly disapprove/disagree” for unfavorable items.

6. On the basis of the results of the pretest, the analyst selects only those items that appear to discriminate well between high and low total scorers. This may be done by first finding the highest and lowest quartiles of subjects on the basis of total score. Then, the mean differences of each specific item are compared between these high and low groups (excluding the middle 50 percent of subjects).

7. The 20 to 25 items finally selected are those that discriminated “best” (i.e., exhibited the greatest differences in mean values) between high versus low total scorers in the pretest.

8. Steps 3 through 5 are then repeated in the main study.

Some final comments are in order. All statements should be expressions of desired behavior and not statements of fact. Two persons with decidedly different attitudes may agree on fact, and that direction is the only meaningful measure when using statements of facts.

The second concern is that a Likert scale is one-stage, combining the measurement of both intensity and direction. As stated earlier, this may lead to reluctance on the part of respondents to either give extreme scores or to use the extreme
position on an individual scale item (central tendency error). To compensate for this situation, researchers can use the longer two-stage format, whereby direction and intensity are separate evaluations.

Multi-Item Scales

In contrast to the approaches for scaling stimuli (attributes) just discussed, researchers have also developed techniques for scaling respondents along an attitude continuum of interest. Two better-known procedures for doing this are the summed scale and the Q-sort technique.

Each type of scale discussed in this chapter can be used either alone or as part of a multi-item scale measuring a construct. A multi-item scale consists of a number of closely related individual attribute items that are rated, and when taken together result in a composite score, forming an index. Multi-item scales are used when measuring complex psychological constructs that are not easily defined by just one rating scale or captured by just one question. The major steps in constructing a multi-item scale are first to clearly and precisely define the construct of interest. This is critical as a scale cannot be developed until it is clear just what the scale is intended to measure. This is followed by the design and evaluation of the scale. A pool of items is developed and a pilot study conducted to further refine the scale and move toward the final version. Validation studies are conducted to arrive at the final scale. Of concern is construct validation, in which researchers assess whether or not the scale measures what it is supposed to measure. At the same time that validity data are collected, normative data can also be collected. Norms describe the distributional characteristics of a given population on the scale. Individual scores on the scale can then be compared and interpreted in relation to the distribution of scores in the population.

A good multi-item scale is both reliable and valid. Reliability is assessed by the scale’s stability across repeated measures (test-retest reliability) and internal consistency reliability of the individual item measures (coefficient alpha). According to Spector (1992), several other characteristics of a good multi-item scale include:

- The items should be clear, well-written, and contain a single idea.
- The scale must be appropriate to the population of people who use it, such as having an appropriate reading level.
- The items should be kept short and the language simple.
- Researchers should consider possible biasing factors and sensitive items.

An example of a multi-item scale is the CETSCALE, developed to measure consumer ethnocentrism within a nation (Shimp & Sharma, 1987). This scale uses a 7 point Likert agreement scale. A Cetscale score for an individual respondent is derived as a sum of item ratings and produces scores ranging from 17 to 119 with higher numbers indicating greater consumer ethnocentrism. One compilation of many different multi-item scales frequently used in consumer behavior and marketing research is provided by Bearden and Netemeyer (1999) in the Handbook of Marketing Scales.
Table 3  Example of a Multi-Item Scale: Consumer Ethnocentrism (CETSCALE)

1. American people should always buy American-made products instead of imports.
2. Only those products that are unavailable in the United States should be imported.
4. American products first, last and foremost.
5. Purchasing foreign-made products is un-American.
6. It is not right to purchase foreign products.
7. A real American should always buy American-made products.
8. We should purchase products in America instead of letting other countries get rich off us.
9. It is always best to purchase American products.
10. There should be very little trading or purchasing of goods from other countries unless out of necessity.
11. Americans should not buy foreign products, because this hurts American business and causes unemployment.
12. Curbs should be put on all imports.
13. It may cost me in the long run, but I prefer to support American products.
14. Foreigners should not be allowed to put their products on our markets.
15. Foreign products should be taxed heavily to reduce their entry into the United States.
16. We should buy from foreign countries only those products that we cannot obtain within our own country.
17. American consumers who purchase products made in other countries are responsible for putting their fellow Americans out of work.

NOTE: Items composing the 10-item reduced version are items 2, 4 through 8, 11, 13, 16, and 17.

Predictions from attitude scales, preference ratings, and the like still must be transformed into measures (sales, market share) of more direct value to the marketer. In many cases, we still do not know how verbalized product ratings, attitudes about corporations, and so on translate into the purchase behavior and sales and profitability measures indicative of effective marketing actions.

Summary

This appendix focused on general concepts of measurement. We discussed the role of definitions, and defined concepts, constructs, variables, operational definitions, and propositions. We then examined measurement, what it is and how measurement relates to developing scales. Also, we briefly discussed alternative causes of variation within a set of measurements. Different types of scales that are commonly used in marketing research were also discussed, as were advanced techniques for scaling stimuli and respondents.

As an appendix to this chapter, we further discuss rules for writing good questions and reducing ambiguity in the survey process. We also discuss the major categories of validity and reliability that should be well-thought-out to produce an unbiased study.
Chapter 5

Demographic and Survey Administration Questions

You’ll often ask some of the same questions in every survey. You can plug these into any survey and make your survey building even easier. Demographics, survey administration, and other frequently re-used questions.
Regularly Asked Questions

Some questions you’ll ask in just about any survey. These questions appear in many shapes and sizes and discuss everything from demographics to informed consent.

Use this chapter as a resource for commonly asked questions. You can append each of these questions to any survey, including any of the surveys referenced in this book. Each will help you to acquire important information.

As a reminder, not all questions are appropriate for all surveys. Whenever you use one of these questions, be sure that it is positioned correctly in the survey flow, that it is appropriate for your target audience, and that it uses terms and tense consistent with the rest of your survey.

Demographic Questions (What are they? Why do they matter?)

Have you ever noticed how television commercials change based upon the program you’re watching?

You wouldn’t expect to see a children’s toy commercial late at night, beer commercials during Saturday morning cartoons, or a sports figure during afternoon soap operas. Smart advertisers use demographics to target commercials in order to get the most bang for their buck.

Similarly, researchers use demographics to segment their audiences and discover hidden trends.

Running a business for a “general population” is almost impossible. Targeting profitable market segments is an important business fundamental. Demographic questions enable you to find unique groups, trends in their behavior, and more efficient ways to target and serve them.

Finding these trends in key markets has allowed leading businesses, non-profit organizations, government agencies, and political candidates to segment their audiences and succeed in working with them.

Here are some typical demographic questions that our experts have reviewed. Some are standard U.S. Census questions, as indicated by “(U.S. Census).” Feel free to use any of them as part of your own research.
AGE

Age can mean everything.

TV shows, deodorant brands, and vacation packages are targeted based upon the typical consumer’s age. Even politicians segment their audiences by age. For example, President Barack Obama won the 2008 election due to his dominance among young voters.

Knowing how different age groups view your product can be a game changer. That’s why many surveys include age-specific questions.

The answer choices to an age question are dependent upon your target audience. A survey about pop music will probably include different age options than a survey about retirement homes. Still scales should allow people of all ages to respond accurately. An “under X” or “over Y” statement is a good way to do this.

Many people are sensitive about their age. For this reason, forcing an answer on age questions is generally discouraged.

![What is your age?](image1)

![What was your age (in years) as of January 1, 2012?](image2)

![What is your current age? (U.S. Census)](image3)
EDUCATION

Do all of your customers have Master's degrees? Perhaps college-educated customers love your service but high school drop-outs find it lacking.

Segmenting your customers by education level can reveal unique trends. Knowing who to target can improve any business.

Education questions tend to ask about the highest level of education completed by an individual or family.

EMPLOYMENT

Does a product cater to a certain industry, pay grade, or experience level? Powerful companies have lost market share and even gone out of business because they catered to the wrong industry or occupation of workers within an industry. That’s why many companies ask employment questions in their surveys.

Employment questions can cover a wide range of issues. They typically address topics such as industry, job function, organization type, organization size, years of experience, and income questions. You can find each of the many formats shown below in the Qualtrics Question Library.
### JOB FUNCTION

**Please indicate your occupation:**

- Management, professional, and related
- Service
- Sales and office
- Farming, fishing, and forestry
- Construction, extraction, and maintenance
- Production, transportation, and material moving
- Government
- Retired
- Unemployed
- Other

**What is your current occupation? (U.S. Census, 17 Categories)**

- Managerial or professional specialty (000-202):  
- Executive, administrative, or managerial (000-042):  
- Professional specialty (043-202):  
- Technical, sales, or administrative support (203-402):  
- Technicians or related support (203-242):  
- Sales (243-302):  
- Administrative support or incl. clerical (303-402):  
- Service (403-472):  
- Private household (403-412):  
- Protective service (413-432):  
- Service, exc. protective or household (433-472):  
- Farming, forestry, or fishing (473-502):  
- Precision production, craft, or repair (503-702):  
- Operations, fabrication or labor (703-902):  
- Machine operation, assembly, or inspection (703-802):  
- Transportation or material moving (803-863):  
- Handling or cleaning equipment, help or labor (864-902):  

**Which occupational category best describes your employment? (U.S. Census, 40 Categories)**

- Management: professional or related occupations  
- Management: business or financial operations occupations  
- Management occupations, except farmers and farm managers  
- Farmers and farm managers  
- Business and financial operations  
- Business operations specialists  
- Financial specialists  
- Computer or mathematical  
- Architects, surveyors, cartographers, or engineers  
- Drafters, engineering, or mapping technicians  
- Life, physical, or social science  
- Community and social services  
- Legal  
- Education, training, or library  
- Arts, design, entertainment, sports, or media  
- Health diagnosing or treating practitioners & technical occupations  
- Health technologists or technicians  
- Health care support  
- Fire fighting, prevention or law enforcement workers, (including supervisors)  
- Other protective service workers (including supervisors)  
- Food preparation or serving-related  
- Building, grounds cleaning or maintenance  
- Personal care or service  
- Sales or related occupations  
- Office or administrative support  
- Farming, fishing, or forestry  
- Supervisors, construction or extraction  
- Construction trades workers  
- Extraction workers  
- Installation, maintenance, or repair occupations  
- Production  
- Supervisors, transportation or material moving  
- Aircraft or traffic control  
- Motor vehicle operators  
- Rail, water or other transportation  
- Material moving
ORGANIZATION TYPE

Where are you employed? (U.S. Census)

- PRIVATE-FOR-PROFIT company, business or individual, for wages, salary or commissions
- PRIVATE-NOT-FOR-PROFIT, tax-exempt, or charitable organization
- Local GOVERNMENT employee (city, county, etc.)
- State GOVERNMENT employee
- Federal GOVERNMENT employee
- SELF-EMPLOYED in own NOT INCORPORATED business, professional practice, or farm
- SELF-EMPLOYED in own INCORPORATED business, professional practice, or farm
- Working WITHOUT PAY in family business or farm

ORGANIZATION SIZE

How many employees work in your establishment?

- 1-4
- 5-9
- 10-19
- 20-49
- 50-99
- 100-249
- 250-499
- 500-999
- 1000 or more

How many employees work in your establishment?

- 1-99
- 100-499
- 500-999
- 1000-4999
- 5000+

What is the annual revenue of your place of business?

- $0-$99,999
- $100,000-$999,999
- $1,000,000-$9,999,999
- $10,000,000+

YEARS OF EXPERIENCE

How many years of professional, full-time work experience in the accounting industry do you have?

- 0-2
- 3-7
- 8-15
- 16-25
- 26+
REVENUE AND INCOME

What is the annual revenue of your place of business?

- Below $20,000
- $20,000–$29,999
- $30,000–$39,999
- $40,000–$49,999
- $50,000–$59,999
- $60,000–$69,999
- $70,000–$79,999
- $80,000–$89,999
- $90,000 or more

What is your annual salary (including bonuses and commissions) in U.S. dollars?

- $0–$25,000
- $25,001–$50,000
- $50,001–$75,000
- $75,001–$100,000
- $100,001–$125,000
- $125,001–$150,000
- $150,001–$175,000
- $175,001–$200,000
- $200,001+

What is your combined annual household income?

- under $20,000
- $20,000–$29,999
- $30,000–$39,999
- $40,000–$49,999
- $50,000–$59,999
- $60,000–$69,999
- $70,000–$79,999
- $80,000–$89,999
- $90,000–$99,999
- $100,000–$109,999
- $110,000–$119,999
- $120,000–$129,999
- $130,000–$139,999
- $140,000–$149,999
- $150,000+

FAMILY

In the world of soccer moms and NASCAR dads, researchers often segment users based on family relationships.

A single mother with seven children lives in a different world than a newlywed couple or a bachelor. Family questions are often about marital status or children. We often ask about education, employment, health, and other demographic questions regarding the respondent’s spouse or children.

Like many demographic questions, family questions can be sensitive. Use caution and consider allowing respondents to opt out of a question that could make them uncomfortable.
YEARS OF EXPERIENCE

How many children (under the age of 18) are currently living in your household?

- 0
- 1
- 2
- 3
- 4
- 5+

How many children do you have (including step-children)?

- 0
- 1
- 2
- 3
- 4
- 5
- 6
- 7
- 8
- 9
- 10
- 11
- 12+

In which educational categories do you have children? Please select all that apply. (U.S. Census)

- Less than 3 years old
- Nursery school or preschool
- Kindergarten
- Elementary: grades 1–4
- Elementary: grades 5–8
- High School: grades 9–12
- College, undergraduate
- Graduate or professional school

What is the highest level of education one of your children has completed?

- Less than High School
- High School / GED
- Some College
- 2-year College Degree
- 4-year College Degree
- Master’s Degree
- Doctoral Degree
- Professional Degree (JD, MD)
MARITAL STATUS / FAMILY STRUCTURE

Please indicate your marital status:
- Single
- Married
- Separated
- Divorced
- Widowed
- Never Married

Please indicate your current family structure.
- Single without children
- Single with children
- Married without children
- Married with children
- Life partner without children
- Life partner with children

What is your family structure? (U.S. Census)
- In a married-couple family
- In a family with female householder, no spouse present
- In a family with male householder, no spouse present
- In a group of unrelated subfamilies
- Unrelated individuals

GENDER

Gender is one of the most fundamental demographic questions. Whether it is for political polls or consumer products, gender often reveals disparity in opinions. For this reason, gender is among the most commonly used demographics for segmenting results.

What is your gender?
- Male
- Female
LOCATION

Do you want to know where customers currently live, where they were born, or their nationality?

You may change what locations you ask about depending upon the survey. In international business, you may only want to ask about country. At a local gas station, you might ask for a city or even a ZIP code.

Because of the length of these lists, location questions are most often asked in drop-down list format.

CURRENTLY LIVING, BIRTH, NATIONALITY

- In which state do you currently reside?
- In which country do you reside?
- Please select the state and county in which you currently reside.
  - State:
  - County:
- In which state were you born?
- In which country were you born?
RACE

As a politically-charged and sensitive subject, race is a topic to avoid if possible. However, asking respondents about their race may be necessary on occasion. Be aware that depending on the perceived use of the data, race questions may be answered incorrectly. Also, many countries are melting pots of cultures and races. Individuals increasingly have multi-racial backgrounds, so check box questions with check all that apply instructions are increasingly appropriate.

If you ask for racial information, always be sure to give respondents the opportunity to not answer. The best way to do this is to create a “prefer not to answer” option in the question text.
A question doesn’t have to be demographic to be asked regularly. University Institutional Review Boards (IRB), and legal departments often require that informed consent questions be asked in surveys.

These questions will give you a feel for other common survey questions.

**INFORMED CONSENT**

Informed consent is often a legal necessity for research. Whether an informed consent question is required by your IRB, legal department, or conscience, we have an example prepared for you.

Our example is remarkably specific, as is the standard for informed consent questions. Add or remove sections as deemed necessary by your IRB. This study example attempts to collect information about differences in individual perception of older role models.

**PROCEDURES**

You will be shown a photograph and short biography of a simulated potential professor and asked to complete a short questionnaire about the person in the photograph. The questionnaire is made up of 15 questions and will take approximately 20 minutes or less. Questions are designed to determine how you expect a simulated professor will behave in a class setting based on your past experience. This questionnaire will be conducted with an online Qualtrics-created survey.

**RISKS/DISCOMFORTS**

Risks are minimal for involvement in this study. However, you may feel emotionally uneasy when asked to make judgments based on the photograph and biography provided. Although we do not expect any harm to come to any participants due to electronic malfunction of the computer, it is possible though extremely rare and uncommon.

**BENEFITS**

There are no direct benefits for participants. However, it is hoped that through your participation, researchers will learn more about which qualities students prefer in professors.
CONFIDENTIALITY

All data obtained from participants will be kept confidential and will only be reported in an aggregated format (only reporting combined results and never reporting individual results). All questionnaires will be concealed, and no one other than the primary investigator and assistant researchers listed below will have access to them. The data collected will be stored in the HIPAA-compliant, secure database until it has been deleted by the primary investigator.

COMPENSATION

There is no direct compensation; however, participants may earn extra academic credit, at the discretion of their professors.

PARTICIPATION

Participation in this research study is completely voluntary. You have the right to withdraw at any time or to refuse to participate entirely without jeopardy to your academic status, GPA or standing with the university. If you desire to withdraw, please just close your Internet browser and feel free to inform the principal investigator at this email principleinvestigator@fakeemail555.com or tell them as you leave.

QUESTIONS ABOUT THE RESEARCH

If you have questions regarding this study, you may contact (Principal Investigator), at 555–555–5555, principleinvestigator@fakeemail555.com or (Assistant 1) 888–888–8888, assistant1@fakeemail555.com, (Assistant 2) 777–777–7777, assistant2@fakeemail555.com.

QUESTIONS ABOUT YOUR RIGHTS AS RESEARCH PARTICIPANTS

If you have questions you do not feel comfortable asking the researcher, you may contact Dr John Doe, 222–222–2222, 1030 SOC. HALL, dr_john_doe@greatuniversity.edu. Or contact the director of your University’s Institutional Review Board, Bob Irb, 888-888-8888, bobirb@greatuniversity.edu.

I have read, understood, and printed a copy of, the above consent form and desire of my own free will to participate in this study.

○ Yes
○ No

Please contact support@surveyz.com if you have any questions regarding this survey.

About what would you expect to pay for a new [Product/Service] like the one described? (Nearest dollar)

[Enter estimated FMV] FMV - 5% FMV - 10% FMV - 20% FMV - 30%

At what price would this new product begin to look inexpensive or cheap? Select one.

FMV + 30% FMV + 20% FMV + 10% FMV + 5%

At what price would the product begin to look too expensive? Select one.

FMV + 30% FMV + 20% FMV + 10% FMV + 5%

At what price would the product begin to look so expensive that you would never consider buying it?

FMV + 30% FMV + 20% FMV + 10% FMV + 5%

If you knew that the average price of [Product/Service] was $[Enter Price], would you expect to pay more or less to buy the described product/service?

(20-30%) more (5-10%) more No more, no less (5-10%) less (20-30%) less
ATTENTION FILTERS FOR SPEEDERS AND CHEATERS

When you create an online survey, there is always a risk that respondents are just “clicking through” without actually looking at the content of a survey.

Fortunately, there is an easy remedy... an attention filter.

An attention filter is a trick question that typically uses a large block of text. In the center, it will ask the respondent to answer in a certain way.

You can then use skip logic to send anyone who answers incorrectly to the end of the survey. You can also track them and prevent “click throughs” from receiving any reward you offered for responding.

Example 1

Recent research on decision making shows that choices are affected by context. Differences in how people feel, their previous knowledge and experience, and their environment can affect choices. To help us understand how people make decisions, we are interested in information about you. Specifically, we are interested in whether you actually take the time to read the directions; if not, some results may not tell us very much about decision making in the real world. To show that you have read the instructions, please ignore the question below about how you are feeling and instead check only the “none of the above” option as your answer.

Please check all the words that describe how you are currently feeling.

- Interested
- Distressed
- Excited
- Upset
- Strong
- Guilty
- Scared
- Hostile
- Enthusiastic
- Proud
- Irritable
- Alert
- Ashamed
- Inspired
- Nervous
- Determined
- Attentive
- Hitty
- Active
- Mad
- None of the above

Example 2

The political environment surrounding the nations of the world has deteriorated at a rapid pace. Many researchers have tried to study these trends and determine why certain nations seem to disagree with each other. Some have speculated that nations don’t listen to each other. Similarly, we find that many people don’t read the questions in surveys. If you want your response to count, please select Latvia and ignore the rest of this text. This is an important study that will help examiners know and understand your views of the nations of the world.

Please select the three nations that you are most familiar with.

- Argentina
- Brazil
- Colombia
- China
- Estonia
- France
- Germany
- India
- Italy
- Lithuania
- Latvia
- Macedonia
- Mongolia
- Korea
- Russia
- Taiwan
- Ukraine
- United Kingdom
- United States
- Uruguay
- Uzbekistan
“TRAP” QUESTIONS

Trap questions are designed to trap individuals who are speeding or cheating as they take the survey. Like large text block questions, these questions are inserted into the survey flow and require specific answers given in the question.

The intent of the questions is obvious and if seen would be answered correctly. However, the questions are placed within a matrix question, thereby making them somewhat difficult for a speeder to spot. These questions are either answered correctly or not, and a speeder will rarely answer all of them correctly. Trap questions are easy to design, as show below.

- If you live in the U.S. select Strongly Agree (Strongly Disagree – Strongly Agree)
- Please answer very unhappy (Very Unhappy – Very Happy)
- How happy are you with receiving a very large bill from the IRS (Very Unhappy – Very Happy)
- The sun rotates around the earth (Strongly Disagree – Strongly Agree)
- Obama was the first American president (Strongly Disagree – Strongly Agree)
- I’ve never heard of Facebook (Not at all like me – Just like me)

REVERSE WORDING OF QUESTIONS

Reverse wording changes the direction of the scale by asking the question in a positive (or negative) voice. The point of reverse wording is that the question is asked twice (in different areas of the survey), once using the positive voice and once using the negative voice. Once the negative version’s scale is reversed, the score should be the same for both versions. If respondents consistently an outlier on the reversed scaled, they are obviously not reading the questions closely and are using a keystroke pattern or putting most answers in a given column.

- I trust Obama’s judgment regarding the economy
- I do not trust Obama’s judgment regarding the economy [reversed]

TIMING

Timing questions, as discussed in the chapter on question types, have two important uses: First, timing questions are very helpful in conducting experiments where it is important to track response times. It is also helpful in identifying respondents who speed through a survey, spending only a few second on each page.

The timing question is valuable because you can see how long respondents were on a page. This is a powerful tool at your disposal to monitor the quality of your response data.
Information gathered by timing questions:

• **FIRST CLICK**: Amount of time that passed before the respondent's first click on page
• **LAST CLICK**: Amount of time that passed before respondent's last click on page before clicking the Next (>>>) button.
• **PAGE SUBMIT**: Amount of time that passed before respondent clicked Submit/Next button on page. This is similar to Last Click.
• **CLICK COUNT**: Total amount of times respondent clicked on the page.

Timing questions are not displayed to respondents, though they are shown under Survey Preview mode for testing purposes (select “Do Not Show Hidden Questions” to not display in preview mode).
Customer satisfaction surveys measure how well a company’s products or services meet customer expectations. Expectations reflect many aspects of the company’s business activities including the actual product and service. Properly constructed customer satisfaction measures tap into the customer’s lifetime of product and service experience, and include the events that occur during consumption, as well as the final outcomes of the experience.
Why Is Customer Satisfaction So Important?

High levels of customer satisfaction (with pleasurable experiences) are strong predictors of customer retention, customer loyalty, and product repurchase. Effective businesses focus on creating and reinforcing pleasurable experiences so that they might retain existing customers and add new customers.

Attribute importance and performance are critical to marketing success of products and services. As shown in Figure 6.1, attributes underperforming relative to attribute importance are in need of improvement and should receive additional focus.

When Should Customer Satisfaction Be Measured?

Proper timing of customer satisfaction surveys depends on the type of product or service provided, the type and number of customers served, the longevity and frequency of customer/supplier interactions, and the intended use of the results. Three very different approaches to measuring customer satisfaction exist, each produce meaningful and useful results but are appropriate for different situations, uses, and needs.
Operators Influence Customer Satisfaction

Customers are generally satisfied because they evaluate the performance experience of a product or service and find that it compares well, relative to external norms and expectations. This process is based on a variety of comparative operators that include expectations, needs, ideal concepts (of excellence and quality), values (higher order human goals), equity (fairness), and regret (dissonance about events that might have been). As these operators mediate product and service performance, consumers develop judgments about the degree and source of satisfaction and dissatisfaction.

POST PURCHASE EVALUATIONS
Post purchase evaluations reflect the satisfaction of the individual customer at the time of product or service delivery (or shortly thereafter). This type of satisfaction survey is typically used as part of CRM (Customer Relationship Management) and VOC (Voice of the Customer) systems. Each focuses on securing a long term relationship with the individual customer.

PERIODIC SATISFACTION SURVEYS
Periodic satisfaction surveys provide an occasional snapshot of customer experiences and expectations and are conducted for specific groups of consumers on a periodic basis.

CONTINUOUS SATISFACTION TRACKING
Continuous satisfaction tracking is often part of a management initiative to assure quality is at high levels over time. Benchmarking satisfaction as a NPS (Net Promoter Score) would be an example. You can base tracking on post-purchase evaluations or a succession of regular customer satisfaction surveys (conducted daily, monthly, quarterly, etc.).

Regardless of the approach, satisfaction surveys provide an understanding of customers' expectations and satisfaction. They usually have multiple questions that address satisfaction on many different levels, such as overall satisfaction, satisfaction with different service providers from the organization, satisfaction with individual product and service attributes, and satisfaction with the benefits recorded as a result of purchase. Satisfaction measurement is like peeling away layers of an onion—each layer reveals yet another deeper layer, closer to the core.
Measures of Customer Satisfaction

Customer satisfaction surveys will often include measures of satisfaction, that reflect emotion, judgment, and behavior, including:

- Overall measures of customer satisfaction
- Affective (emotional-liking) measures of customer satisfaction
- Cognitive (decision making) measures of customer satisfaction
- Behavioral measures of customer satisfaction
- Expectancy value measures of customer satisfaction
- Intentions of future purchases

Let’s consider each in a little more detail. Because general measures of customer satisfaction usually involve product fulfillment, we will use product use scenarios to focus on where and how the satisfaction measures are used.
Satisfaction Measurement: Overall Measures of Satisfaction

When we have a great food experience at a favorite local restaurant, we usually want to go back. Here, positive evaluations result in elevated levels of customer satisfaction, which lead to customer loyalty and product repurchase. But measures of satisfaction are not measures of loyalty. Satisfaction measurement questions typically include items such as:

1. AN OVERALL SATISFACTION MEASURE (EMOTIONAL)

*Overall, how satisfied are you with “La Jolla Grove restaurant”?*

This question reflects the overall opinion of a consumer's satisfaction experience with a product he or she has used.

The single greatest predictors of customer satisfaction are the customer experiences that result in attributions of quality. Perceived quality is often measured in one of three contexts: overall quality, perceived reliability, and the extent to which a product or service is able to fulfill the customer's needs.

It is commonly believed that dissatisfaction is synonymous with purchase regret while satisfaction is linked to positive ideas such as “it was a good choice” or “I am glad that I bought it.”

2. A LOYALTY MEASURE (AFFECTIVE, BEHAVIORAL)

*Would you recommend “La Jolla Grove restaurant” to your family and friends?*

This single question measure is the core NPS (Net Promoter Score) measure.

Customer loyalty reflects the likelihood of repurchasing products or services. Customer satisfaction is a major predictor of repurchase but is strongly influenced by explicit performance evaluations of product performance, quality, and value. Loyalty is often measured as a combination of measures including overall satisfaction, likelihood of repurchase, and likelihood of recommending the brand to a friend. A common measure of loyalty might be the sum of scores for the following three questions:

- Overall, how satisfied are you with [brand]?
- How likely are you to continue to choose/repurchase [brand]?
- How likely are you to recommend [brand] to a friend or family member?
3. A SERIES OF ATTRIBUTE SATISFACTION MEASURES (AFFECTIVE AND COGNITIVE)

How satisfied are you with the “taste” of your entre at La Jolla Grove?
How important is “taste” in your decision to select La Jolla Grove restaurant?

Affect (liking/disliking) is best measured in the context of product attributes or benefits. Customer satisfaction is influenced by perceived quality of product and service attributes, and is moderated by expectations of the product or service. The researcher must define and develop measures for each attribute that is important for customer satisfaction.

Consumer attitudes toward a product develop as a result of product information or any experience with the product, whether perceived or real. Again, it may be meaningful to measure attitudes towards a product or service that a consumer has never used, but it is not meaningful to measure satisfaction when a product or service has not been used.

Cognition refers to judgment: the product was useful (or not useful); fit the situation (or did not fit); exceeded the requirements of the problem/situation (or did not exceed); or was an important part of the product experience (or was unimportant). Judgments are often specific to the intended use application and use occasion for which the product is purchased, regardless if that use is correct or incorrect.

Affect and satisfaction are closely related concepts. The distinction is that satisfaction is “post experience” and represents the emotional affect produced by the product’s quality or value.

4. INTENTIONS TO REPURCHASE (BEHAVIORAL MEASURES)

Do you intend to return to the La Jolla Grove restaurant in the next 30 days?

When wording questions about future or hypothetical behavior, consumers often indicate that “purchasing this product would be a good choice” or “I would be glad to purchase this product.” Behavioral measures also reflect the consumer’s past experience with customer service representatives.

Satisfaction can influence other post-purchase/post-experience actions like communicating to others through word of mouth and social networks. Additional post-experience actions might reflect heightened levels of product involvement that in turn result in increased search for the product or information, reduced trial of alternative products, and even changes in preferences for shopping locations and choice behavior.

EXHIBIT 7.1 CUSTOMER LOYALTY MEASURES

Measures of loyalty are imperfect predictors of the brand switching that occurs in actual consumer purchase situations. Customers switch brands because of out of stock situations, inconvenience of going to a store that has the preferred brand, or lack of commitment to the brand. This latter condition has been addressed by Gallup in the identification of four emotional states that are indicative of the degree of commitment and brand loyalty.
### Constructs and Typical Measures

<table>
<thead>
<tr>
<th>Construct</th>
<th>Typical Measures</th>
</tr>
</thead>
<tbody>
<tr>
<td>Confidence in the brand</td>
<td>[Brand] is a name I can trust. [Brand] always delivers on what they promise.</td>
</tr>
<tr>
<td>Integrity of the brand</td>
<td>[Brand] always treats me fairly. If a problem arises, I can always count on [brand] to reach a fair and satisfactory resolution.</td>
</tr>
<tr>
<td>Pride in the brand</td>
<td>I feel [Brand] always treats me with respect. I feel proud to be a [Brand] customer.</td>
</tr>
<tr>
<td>Passion for the brand</td>
<td>[Brand] is the perfect company for people like me. I can’t imagine a world without [Brand].</td>
</tr>
</tbody>
</table>

The application of these loyalty scales enables the differentiation of brands, companies, and even industries according to how well they are “engaging” their customers. Measuring customer loyalty opens the door for the creation of performance benchmarks. Customer experience can be tracked and improved to create an image of trust, confidence, and fairness.

Customer loyalty is created by front-line employees who interact with the customer. Every company faces the challenge of escalating customer expectations. Customer loyalty and retention are increased by meeting expectations in a timely and effective manner.

---

**Satisfaction Measurement: Perceived Value Measures**

Value is the “overall price divided by quality” or the “overall quality divided by price.” Perceived value is measured in many ways including overall value received, expectations of the price that should be paid, and may involve even more rigorous methodologies like the Van Westendorp pricing analysis and conjoint analysis. Qualtrics advanced question types and the online survey university contain white papers and tutorials about these topics.

Buyers use price as a primary indicator of quality when other attributes and benefits are little understood. Later, as repeat purchases are made and product knowledge increases, price may be reduced in importance. This may reflect a decision simplification strategy that makes shopping or purchase decisions easier or may even reflect increased customer loyalty.
Incorporating Expectations Into Measures of Customer Satisfaction

Customer satisfaction reflects the expectations and experiences that the customer has with a product or service. Expectations reflect both past and current product evaluation and use experiences. For example, major purchases are researched before purchase. We collect information from advertising and salespersons, we talk to friends and associates, and we may even test the product. This information influences our expectations and gives us the ability to evaluate quality, and value and the ability of the product or service to meet our needs.

Customers hold both explicit and implicit performance expectations for attributes, features, and benefits of products and services. The nature of these expectations will dictate the form and even the wording of satisfaction questions. You can develop evaluations using many different perspectives on expectations.

**EXPLICIT EXPECTATIONS**
Explicit expectations are mental targets for product performance, such as well-identified performance standards. For example, if expectations for a color printer were for 17 pages per minute and high quality color printing, but the product actually delivered 3 pages per minute and good quality color printing, then the cognitive evaluation comparing product performance and expectations would be $17 \text{ PPM} - 3 \text{ PPM} + \text{High} - \text{Good}$, with each item weighted by the associated importance.

**IMPLICIT EXPECTATIONS**
Implicit expectations reflect established norms of performance. Implicit expectations are established by business in general, other companies, industries, and even cultures. An implicit reference might include wording such as “Compared with other companies…” or “Compared to the leading brand…”

**STATIC PERFORMANCE EXPECTATIONS**
Static performance expectations address how performance and quality are defined for a specific application. Performance measures related to quality of outcome may include the evaluation of accessibility, customization, dependability, timeliness, accuracy, and user friendly interfaces. Static performance expectations are the visible part of the iceberg; they are the performance we see and—often erroneously—are assumed to be the only dimensions of performance that exist.

**DYNAMIC PERFORMANCE EXPECTATIONS**
Dynamic performance expectations are about how the product or service is expected to evolve over time. Dynamic expectations may be about the changes in support, product, or service needed to meet future business or use environments. Dynamic performance expectations may help to produce “static” performance expectations as new uses, integrations, or system requirements develop and become more stable.

**TECHNOLOGICAL EXPECTATIONS**
Technological expectations focus on the evolving state of the product category. For example, mobile phones are continually evolving, leading to higher expectations of new features. Mobile service providers, in an effort to limit a consumer’s
ability to switch to new technology phones, have marketed rate plans with high cancellation penalties for switching providers, but with liberal upgrade plans for the phones they offer. The availability of low profile phones with email, camera, MP3, blue tooth technology, and increased storage will change technology expectations as well as the static and dynamic performance expectations of the product. These highly involving products are not just feature based, but raise expectations that enhance perceptions of status, ego, self-image, and can even evoke emotions of isolation and fear when the product is not available.

INTERPERSONAL EXPECTATIONS

Interpersonal expectations reflect the relationship between the customer and the product or service provider. Person to person relationships are increasingly important, especially where products require support for proper use and functioning. Support expectations include interpersonal sharing of technical knowledge, ability to solve a problem, ability to communicate, reduced time to problem resolution, courtesy, patience, enthusiasm, helpfulness, assurance that they understood my problem and my situation, communication skills, and customer perceptions regarding professionalism of conduct, often including image and appearance.

SITUATIONAL EXPECTATIONS

In building a customer satisfaction survey, it is also helpful to evaluate why pre-purchase expectations or post-purchase satisfaction may or may not be fulfilled or even measurable. The following conditions may be considered:

1. Expectations may not include unanticipated service attributes that are new to that consumer.
2. Expectations may be based on vague images, thereby creating wide latitude of acceptable performance and expected satisfaction.
3. Product performance expectations and evaluations may be sensory and not cognitive, as in expectations of taste, style or image. Such expectations are not only difficult to evaluate and understand, but may change over time and with consumption.
4. The product use may attract so little attention as to produce no conscious affect or cognition (evaluation). When measured, this results in meaningless satisfaction or dissatisfaction information.
5. There may have been unanticipated benefits or consequences of purchasing or using the product (such as a uses, usage situations, or features not anticipated with purchase).
6. The original expectations may have been unrealistically high or low.
7. The product purchaser, influencer and user may have each been a different type of individual, each having different expectations.

Your research study may also benefit from considering expectations related to perceived quality and value.
Parasuraman, Ziemthaml, and Berry (1998) introduced a service satisfaction scale called SERVQUAL. SERVQUAL identifies service expectations and performance gaps that organizations should measure and manage. The five generic dimensions of the scale include tangibles, reliability, responsiveness, assurance, and empathy. SERVQUAL has become the standard for service quality measurement.

Recent research has shown that as would be expected, the SERVQUAL satisfaction dimensions will vary depending on the application (high tech vs. health care vs. leisure services, etc.). Applications of the SERVQUAL instrument are found in the Qualtrics survey library. In the full instrument, 22 individual statements are organized along five general dimensions or factors:

1. **TANGIBLES**: Physical facilities, equipment, and appearance of employees.
2. **RELIABILITY OF SERVICE**: Ability to perform the promised service dependably and accurately.
3. **RESPONSIVENESS**: Willingness to help customers and provide prompt services.
4. **ASSURANCE (COMPETENCE, COURTESY, CREDIBILITY, AND SECURITY)**: Knowledge and courtesy of employees and their ability to inspire confidence and trust.
5. **EMPATHY (ACCESS, COMMUNICATION, UNDERSTANDING)**: Ability of employees to deliver caring, personal attention.

These statements may be weighted and analyzed by their dimension importance or summed for an overall service quality score.

**MODIFIED SERVQUAL INSTRUMENT**

**Perceptions Section**

**DIRECTIONS**: The following set of statements relate to your feelings about XYZ Company’s repair service. For each statement, please show the extent to which you believe XYZ has the feature described by the statement. Selecting a "1" means that you strongly disagree that XYZ has that feature, and circling a "7" means that you strongly agree. You may circle any of the numbers in the middle that show how strong your feelings are.

There are no right or wrong answers - all we are interested in is a number that best shows your perceptions about XYZ’s repair service.

DIRECTIONS: Listed below are five features pertaining to health care facility and the services they offer. We would like to know how important each of these features is to you when you evaluate a health care facility's quality of service.

Please allocate a total of 100 points among the five features according to how important each feature is to you – the more important a feature is to you, the more points you should allocate to it. Please ensure that the points you allocate to the five features add up to 100.

1. The appearance of the health care facility's physical facilities, equipment, personnel, and communications materials
2. The ability of the health care facility to perform the promised service dependably and accurately.
3. The willingness of the health care facility to help customers and provide prompt service.
4. The knowledge and courtesy of the health care facility's employees and their ability to convey trust and confidence.
5. The caring, individualized attention the health care facility provides to its customers.

| P1. Health care facilities have up-to-date equipment. | 0 |
| P2. Health care facilities have visually appealing physical structures / buildings. | 0 |
| P3. Health care facility employees appear neat. | 0 |
| P4. Health care facilities provide their services at the time they promise to do so. | 0 |
| P5. Health care facilities are sympathetic and reassuring. | 0 |
| P6. Health care facilities are accurate in their billing. | 0 |
| P7. Health care facility employees tell patients exactly when services will be performed. | 0 |
| P8. Patients receive prompt service from health care facility employees. | 0 |
| P9. Health care employees are always willing to help patients. | 0 |
| P10. Patients feel safe in their interactions with health care facility employees. | 0 |
| P11. Health care facility employees are knowledgeable. | 0 |
| P12. Health care facility employees are polite. | 0 |
| P13. Health care facility employees get adequate support from their employers to do their jobs well. | 0 |
| P14. Health care facility employees give patients personal attention. | 0 |
| P15. Health care employees have their patients' best interest at heart. | 0 |
Demographics

These final few questions will help us to understand your answers. Again, all information is confidential.

What is your age?

What is your gender?
- Male
- Female

What is the highest level of education you have completed?

What is your family structure?

Which of the following best describe your household situation? (check all that apply)
- Children, preschool
- Children, elementary school
- Children, Jr / Sr. high school
- Children, post high school
- Grandchildren with one or more of their parents present, living in your home
- Grandchildren with neither parent present, living in your home
- Parents, inlaws or other adult family in your home
- Providing around the clock care for parents, inlaws or others
- None of the above

What best describes your employment?
- Management, professional, and related
- Service
- Sales and office
- Farming, fishing, and forestry
- Construction, extraction, and maintenance
- Production, transportation, and material moving
- Government
- Retired
- Disabled
- Unemployed
- Other

Thank you for your time in helping us at COMPANY to continually improve our products and services. If you have any questions we can help you with, please contact support@company.com, or call 1-800-123-1234 and a representative will be happy to assist you.
Summary

Customer satisfaction is at the core of human experience, reflecting our liking of a company’s business activities, including products and services. In this chapter, we have identified that high levels of satisfaction lead to higher levels of loyalty, product repurchase, and custom retention.

Customer satisfaction, loyalty, and value measures have been demonstrated. Satisfaction is mediated by our expectations and reflect the many aspects of our lives that interface with the world in which we live.

We concluded with an example of the SERVQUAL instrument for measuring satisfaction with service quality.

In our next chapter, we continue our discussion of survey applications by focusing on concept testing and how surveys can help refine ideas to make them more acceptable.
Potential consumers are involved to provide their reactions to written statements, images or graphics, or actual implementations of the basic idea for the product. Concept testing is most often a Go/No screening that serves to eliminate those concepts that have very little potential.
Writing Concept Test Surveys

**Concept Testing:** How people, without prompting, interpret a deliberately sketchy idea for a new product or service. Concept testing is most often used in concept development to test the success of a new product idea before it is marketed. Concept analysis is often used as one step in the process of providing “proof of concept.” (Smith and Albaum, 2010)

Concept tests provide the direction and guidance necessary to identify and communicate key product and service benefits and uses, as well as product specific implementations, such as packaging, advertising, sales approaches, product information, distribution, and pricing. Concept tests identify the perceptions, wants, and needs of the product and service users and decision makers. You can integrate each of these dimensions into a concept test survey.

A variety of concept testing survey formats are available and can be implemented. Each helps to minimize risk and maximize revenue when introducing all types of goods and services to the market.

What Can a Concept Test Do For You?

Concept tests reshape and refine ideas so that they have greater potential for market acceptance. Specifically, concept tests:

1. Indicate concentrated segments of the population to which the product appeals.
2. Assess the relative appeal of alternative product ideas/configurations/positions. Features desirable to the targeted market segments are highlighted.
3. Provides necessary information for developing the product and its promotion, distribution, and pricing.

Concept testing provides insight for designing a more optimal product or service. Furthermore, the success of new product ideas can be tested before being marketed. Concept tests are best conducted when the concept has been developed to the point that it conveys the product attributes, the desired positioning and the intended brand personality. Actual product concept tests evaluate the core concept through exposure to a story board, sketches, graphics, or even a product mock-up.

Concept tests are pre-design and differ from the pre-market tests and the test markets. These latter check points are conducted later in the development cycle—based on finalized product designs. Pre-tests and test-markets are final verifications to avoid a major market error.

The term concept test is also sometimes thought of as a “proof of concept,” which refers to market viability and market share projections that are often required for venture capital funding.
Concept tests, when made actionable, will laser focus your products and priorities. Specifically, concept tests have the ability to improve the product, shift priorities, and increase the product-market match as explained in the following examples:

### Table 7.1  Examples of Future Problems Can Be Solved with Concept Tests

| **ROADMAP OF DEVELOPMENT PRIORITIES:** | Development plans are cancelled for three new features because of low importance to customers and high associated development costs. |
| **SCHEDULING AND LAUNCH PRIORITIES:** | Based on the concept test, a product is given higher priority for launch because of a demonstrated greater market potential. The concept test identifies not only market potential but may identify problems leading to potential failure at launch. |
| **POTENTIAL NEW USES:** | New product uses are discovered through a new product concept test that may potentially double product sales. |
| **PRODUCT SUPERIORITY:** | New features are added to the existing product to meet the demands of customers before the competition responds. The proposed features of greatest value now receive top priority for development and implementation. The product gains a competitive advantage by further distancing itself from the competition. Concept tests help you prioritize and implement ahead of the competition. |
| **ELIMINATE PRODUCT DEFICIENCY:** | The current product design is evaluated and performance tests reveal flaws in the design and implementation. This information is verified in the new concept tests. |
| **PROMOTION PLANNING:** | Concept tests combined with market analysis provide understanding of who is buying and where they can be reached. Most importantly we identify the message that motivates customers to respond. |
| **INCREASED PROFITABILITY:** | Concept testing shows that we are delivering the best value in the market and have room for a 10% increase in price for the new product |
Not All Concept Tests Are Equal

A variety of concept test approaches exist. Each has a different objective and can provide a variety of benefits. Table 7.2 identifies the most important of these approaches.

<table>
<thead>
<tr>
<th>Table 7.2 Forms of Concept Testing</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>NEW PRODUCT CONCEPT TESTS:</strong> Identify the benefits most important to customers and the features that are most likely to lead to the fulfillment of that promise. Features can be categorized into “need to haves” and “nice to haves.” Customer needs must be identified and prioritized for product development and communicating to the market. This type of concept test can also test customer initial reactions to the concept (Reaction and Adoption Test ).</td>
</tr>
<tr>
<td><strong>PRODUCT MODIFICATION-UPGRADE TESTS:</strong> Reformulations, modifications, and upgrades can add new life to existing products and services. Here, identifying the optimal bundle of features is a priority. Differentiating and timing the release of new features that are “need to haves” vs. “nice to haves” is critical in creating products and services that are truly “New and Improved” and are “New Release” and “Upgrade” worthy.</td>
</tr>
<tr>
<td><strong>MIGRATION PATH TESTS:</strong> Many products and services offer upgrade or migration paths. For the customer, this is an alternative to the next new thing. Understanding the key features and benefits is critical in mapping consumer needs to the likelihood of upgrading an existing product or adopting a new technology. “Do benefits outweigh the costs and challenges of changing?” Features, Benefits, Brands, Image, Costs, and Training are but a few factors to consider.</td>
</tr>
<tr>
<td><strong>PRODUCT USABILITY – SERVICEABILITY TESTS:</strong> Concept use tests assess the use experience. How can the experience with a specific product or service be improved? This research can focus on a variety of areas—ease of use, similarity to current usage patterns, the ability to adapt and use critical feature implementations, and the congruency with current image, usage patterns, and service provisions.</td>
</tr>
<tr>
<td><strong>PRICING AND INCENTIVES TESTS:</strong> No one underestimates the importance of price expectations in new product adoptions. Price, incentives, bundling, cross product tie-ins, and cost mitigating factors, such as warranties and use agreements… all change price perceptions and perceptions of value. Pricing and incentive tests determine the optimal pricing point for new product concept bundles and can estimate customer price acceptability curves.</td>
</tr>
</tbody>
</table>

How to Conduct a Concept Test

We have identified the several general categories of “concept tests.” These different tests are developed and implemented based on their timing in the product development cycle and the purpose or information desired. For example, concept
screenings are conducted early in the product development cycle and are conducted to identify competitive challenges and weaknesses in the concept that is being developed. Screenings are generally followed by use, usability, positioning, and demand analysis research as the concept is finalized.

**TYPE I: CONCEPT SCREENING TESTS**

Concept screenings represent product ideas that are presented to consumers in verbal or visual form and then quantitatively evaluated to measure the degree of concept believability, personal relevance, and purchase intent. Concept screenings typically identify:

- Concept ideas that are sufficiently promising to merit further consideration and development
- Believability, relevance
- Perceived uniqueness, value
- Multiple measures of attribute desirability
- Relative attribute performance advantages
- Potential of trial
- Measures of trial potential based on multiple measures that go beyond purchase intent.

**TYPE II: PRODUCT-MARKET POSITIONING CONCEPT TESTS**

Concept tests for positioning and demand analysis involve comparing concepts with competing brands. Concepts are positioned and evaluated together to determine relative advantage and potential share. Selected measures from the Type I Concept Test, are augmented with the following measures:

- Product comparison sets that test relative superiority of the concept vs. competing brands
- Opportunity size determination to estimate preliminary sales
- Profiling of potential adopters who are targeted in the product launch
- Strengths/weaknesses analysis on key attributes/benefits
- Awareness/distribution impact as a share of markets

**TYPE III: PRE-MARKET CONCEPT TESTS**

Pre-market concept tests are conducted to minimize the risk of failure in the market by making final product and communications adjustments before launch. The concept is typically compared to competing products to determine if the product delivers what is promised by the concept. This test often measures:

- Attractiveness of a new product or service, including identifying its strengths and weaknesses
- Evaluation of the level of agreement between the concept and the specific brand attributes
- Detection of concept communication problems that may interfere with appropriate comprehension by the target segment
- Indicators of purchase intention with scenarios varying from most optimistic to the most conservative
In the end, concept tests measure the importance and promise of end benefits and determine if the product or service concept brings pleasure in use. The consumer ultimately evaluates the consumption pleasure and judges if it is of greater value than that provided by competing choices.

For the product manager, the quest is for better competitive positioning and the question is why is it better, and if it is not, then why. Usually the answer is found in the consumer's view of the concept's attribute evaluation ratings, uniqueness, and believability.

Exhibit 7.1 provides insight into the procedures followed when actually conducting the various types of concept tests.

**Exhibit 7.1 Organizing a Concept Screening Test**

**ORGANIZING A CONCEPT SCREENING TEST**

**DEVELOP A CONCEPT STORY BOARD**
Copy and possibly photograph an illustration that describes how the product works and its end benefits.

**INTERVIEW**
- Concept testing is usually conducted in a central location (could be done by telephone or mail). A typical test is done by intercept method (at a mall, food store, or other high traffic location), or at a research facility.
- For new product concept screening, 5-8 concepts are often viewed.
- When testing alternative products for purchase and incentives, concept screening tests use 10 or more products.

**QUESTIONS ASKED**

<table>
<thead>
<tr>
<th>Purchase intentions</th>
<th>Uniqueness of the idea</th>
<th>Importance of the message</th>
</tr>
</thead>
<tbody>
<tr>
<td>Purchase frequency</td>
<td>Believability of the idea</td>
<td></td>
</tr>
</tbody>
</table>

Alternatives are presented and respondents are asked to evaluate concepts according to how interested they are in purchasing the product.

**ANALYSIS APPROACH**

1. Examine intention scores
2. Combine “definitely would buy” and “probably would buy”
3. Classify the concepts into a 2 x 2 schema for evaluation: High - Low Purchase Intention x High - Low Uniqueness
Chapter 7: Concept Testing

Survey Components for a Basic New Product Concept Study

Concept tests can be easily constructed once the researcher is aware of the key components that should be included in the test instrument. Of course, these components will vary with the purpose of the concept study. Sample concept test surveys are available for reference, copying, and editing in the Qualtrics survey library.

In building a concept test survey, the researcher is urged to carefully consider the objectives of the concept test and to then determine if the measures used will successfully answer the objective-related questions. Pre-test the instrument by reviewing the purpose and results, and then make sure that the study purpose is answered with exactness.

The major components and measures of a concept test include:

What to Look for in a Concept Test

Concept tests look for early points of product weakness and market failure that can be fixed pre-launch. This core problem that concept tests target is addressed in the following list of must “identify” items.

- Identify the effectiveness of individual concept assets
- Identify the barriers to achieving the concept’s full potential
- Identify consumer relationships with the concept
- Identify the status of the concept in a competitive context

- Identify failure of advertising to communicate clearly
- Identify failure of packaging that is too non-intrusive
- Identify failure through unmemorable product personality
- Identify failure through consumer’s lack of value perceptions
- Identify the brand equity assets
- Identify potential consistencies in brand image and consumer perceptions
- Identify potential inconsistencies in brand image and consumer perception

- Identify unrecognized product benefits
- Identify failures of the brand to integrate into the consumer’s lifestyle
- Identify a blurred image
- Identify an elusive brand/concept personality
CONCEPT PRESENTATION
Describe the concept completely. Use graphics, video, audio, samples, or whatever best portrays the concept and associated attribute and benefit messages that are being tested.

OVERALL CONCEPT REACTION MEASUREMENT
- Concept need / relative improvement over current method of doing things
- Overall reaction to the concept (acceptability, desirability, interest)
- Likelihood of purchase of concept

DETAILED CONCEPT ANALYSIS EVALUATION
- Likes and dislikes about the concept
- Attribute list evaluation
- Awareness of competing products
- Awareness of substitute and complementing products
- Superiority over other existing products

USE SITUATION EVALUATION
- Likelihood of use in specified situations
- Current use of similar / competing products
- Frequency of product use

VALUE ANALYSIS
- Estimate product value
- Price sensitivity analysis
- Preferred method of purchase

SEGMENTATION ANALYSIS
- Market segments most likely to use (ordering and prioritization)
Exhibit 7.2  Flow of a Typical Concept Test

FLOW OF A TYPICAL CONCEPT TEST

• Introduction and qualify respondents (not part of a disqualification group)
• Measure awareness of product brands
• Measure brands purchased (within the product class) in past three months
• Introduce concept descriptions with measures of likelihood of purchase
• Identify purchase dimensions: number of bottles, frequency of purchase
• What is the perceived value of the product concept
• Innovativeness of concept measure
• Affective evaluation: like-dislike measure
• Measure the concept’s power to replace the current brand purchased
• Frequency of consumption in a day
• Believability of concept
• Relevance of concept to the respondent
• Attribute and benefit evaluations:
  • Is a good value for the money
  • Would help me to…. Be mentally sharp
  • Would benefit me... (tastes good or is something I would consume everyday)
  • Has attractive packaging
  • Would provide me with a high level of health
• Source of purchase (location)
• Demographics

Other Research Supportive of Concept Tests

Knowing more about consumers and their usage of the product will lead to better product development and marketing. Psychological and behavioral evaluations provide an understanding of critical consumer needs. The result is actionable insights that drive product and promotion development. Below are five common research study types that support concept test and new product development efforts.
Table 7.3 Common Research Supporting of Concept Tests

<table>
<thead>
<tr>
<th><strong>NEEDS ANALYSIS</strong></th>
<th>Identify the core customer needs and test the viability of a new market segment. These needs, once identified, can be targeted by new product concepts.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>HABITS AND USES ANALYSIS</strong></td>
<td>Identify the core customer habits and uses of the product class. This analysis is conducted to understand the way consumers function while solving their problem and using the product. This also involves segmentation. Habits and uses are critical in understanding the adoption of new product concepts and the new product concepts and ideas that are formulated.</td>
</tr>
<tr>
<td><strong>CONCEPT FULFILLMENT AND PREFERENCE TESTING</strong></td>
<td>Evaluate the product category as a focus for fulfilling market needs. Inherent in this concept test and fulfillment analysis are ties to the positive elements (benefits) and negative elements (inhibitors) that direct the purchase evaluation process. Often the best potential concepts are ranked by potential of success.</td>
</tr>
<tr>
<td><strong>DECISION PROCESS ASSESSMENT</strong></td>
<td>The decision and purchasing process, including the key influencers and decision makers are all considered as part of the concept test. Each purchaser, decision maker, and influencer involved in the purchase process relies on different information sources to establish the credibility of the product. Additionally, the concept must be integrated into the user’s psyche, influencing how benefits and values are actually received.</td>
</tr>
<tr>
<td><strong>MONETARY RETURNS, PSYCHOLOGICAL RETURNS AND TOTAL COST OF OWNERSHIP</strong></td>
<td>Understand the specific costs and financial benefits that the new product brings to customers. Model and quantify these benefits so that they can be used in advertising and sales collateral.</td>
</tr>
</tbody>
</table>

We now look more closely at two of these frequently used studies: the habits and uses study and the concept fulfillment and preference testing study.

**The Habits and Uses Study**

Preparation for a concept test often includes the habits and uses study. Habits and uses studies are directed at understanding usage situations including how, when, and where the product is used. Habits and uses studies sometimes include a real or virtual pantry audit. Understanding actual consumer behavior goes a long way in explaining preferences for new concept. The major components of the habits and uses study include:

**FREQUENCY OF PRODUCT USE**

- Identify usage segments: User/non-user, frequency, and amount of product use (Identify Heavy, Medium, Light, Non-user segments). Relative use: more or less of a user than other people using the product.
- Comfort with use of the product / service (are you a product user; do you currently own…)

132 | Chapter 7: Concept Testing
SITUATIONAL USE
- Primary and secondary product use situations
- Primary use location
- Critical issues and needs for product / service use
- Identification of use situations (+ identify new uses that are currently unknown to you/your company)
- How do you use the product?
- How have you used the product (in what ways, applications, uses, problems solved, experience)
- Reason for not purchasing more of the product / service (current or alternative use situations)
- How has the customer studied or learned how to use the product more effectively
  (Is there a user group, a sub-culture group?)

EXPERIENTIAL USE
- Identification of brand usage experience
- From whom did you learn to use the product? (sphere of influence)
- Which brands have you used?
- Which brand are you currently using?
- Beliefs about product / service use benefits
- Identification of the stereotypical user profile

USE SATISFACTION – USE LOYALTY
- Satisfaction with current use of brand/product/service
- Loyalty of use (may be a series of items… see product loyalty measures)

Concept Fulfillment Tests
Attributes, Features, Benefits

Products contain bundles of benefits (both tangible and image) that are associated with product attributes and are implicitly inferred or explicitly promised to the user. Product fulfillment studies determine if the expectations created for the product through advertising, packaging, and product imaging are fulfilled when the product is used. We now consider the major components of this study type.

PRODUCT USE SCENARIO
- Use scenario descriptors (where and how is the product used?)
- Frequency of product use
- Primary use location (home, work, etc.)
- Primary precipitating events or situations leading to product use or need
- Usage rate trend (more, same, less than a month ago)
PRODUCT FAMILIARITY
- Degree of actual product use familiarity
- Knowledge (read product information, read product label, etc.)
- Knowledge base of product — Are they “hard core” consumers, a “maven,” the super love group.
- Company contact: Have they called the 800 number, etc.
- Awareness of other brands
- Reasons for original product purchase (selection of reasons)
- Primary benefits sought from the product

PRODUCT EVALUATION
- Attribute evaluation matrix (questions about product quality, price, trust, importance, performance, value, etc.)
- Perceived benefit associations matrix
- Importance, performance
- Identification of primary benefits sought
- Comparison to other brands (better, worse)
- What is the best thing about the brand, what could be done better

ADVERTISING AND PACKAGING EVALUATION
- Packaging size, design
- Advertising promise, message fulfillment evaluation

VALUE ANALYSIS
- Expectation of price
- Expectation of relative price (full price, on sale)
- Current price paid

SATISFACTION MEASUREMENT
- Overall satisfaction

Concept fulfillment tests identify and evaluate the individual attributes describing the concept and also evaluate overall concept preference. This methodology does not identify the effects of combinations of attributes or how to modify attributes to optimize consumer acceptance and preference. Conjoint analysis is the methodology used to conduct this type of advanced concept or product test.
Conjoint Analysis for Advanced Concept Test

Conjoint analysis establishes which attributes are important to consumers and identifies how important they really are. Conjoint analysis determines the combination of product attributes that consumers most prefer. When applied to product, service, and communications projects, we can identify those product and service attributes or communications messages that are most preferred and best combined to produce maximum effect.

Conjoint analysis originated out of the mathematical psychology research of conjoint measurement. Green and Wind (1973) state that conjoint measurement is concerned with the simultaneous measurement of the joint effect and separate independent variable contributions to that joint effect. In layman’s terms, conjoint analysis identifies the attributes important in a choice decision, identifies the way the attributes are combined to make the decision, and determines the utility value of each of the levels of each of the attributes considered in the decision.

Conjoint analysis develops models that represent how people choose between products. Based on choice analysis, we predict choice share for the different product configurations that may be introduced into a competitive marketplace. For further discussion of conjoint analysis, you may refer to the Qualtrics University for white papers and the third book in this series that focuses on Measurement and Analysis (Smith and Albaum 2013).

Thinking about where you shop for sports/energy drinks, where do you, yourself, typically purchase your sports/energy drink products? (Please check all that apply.)

| Mass Merchandiser (i.e. Kmart, Target, Wal-Mart) | Dollar Store (i.e. Dollar General, Family Dollar) | Gas Stations |
| Drug Store | Club/Warehouse Stores (i.e. Sam's, Costco) | Gym, Exercise Studio |
| Grocery Store/Supermarket | Internet | Do not purchase sports/energy drinks |
| Specialty Retail Store | Health food Store | Other (Please specify) |
| Direct marketing |

INCLUDING YOURSELF, how many people live in your household?

What is your family structure?

- In a married-couple family
- In a family with female householder, no spouse present
- In a family with male householder, no spouse present
- In a group of unrelated subfamilies
- Unrelated individuals
Summary

Concept tests are used in early stages of product development to test the success of new ideals. As a go/no screen, concept tests are critical tools for saving money and effort that might otherwise be wasted.

Concept tests also provide direction and guidance in developing and communicating key product and service benefits and uses.

This chapter has discussed a variety of concept test ingredients and formats. Sample concept test surveys, along with many other survey types and implementations are presented in the final sections of this book and in the Qualtrics Survey Library.
Writing a great survey can be difficult. The Qualtrics Survey Library has hundreds of completed surveys for you to use. Feel free to use these surveys, in whole or in part, for your organization.
Are there perfect surveys? Only if you write them, because every survey must be perfect for you and your individual survey application and needs. The Qualtrics Library is available to you. We hope you will find surveys that are useful to you that you can edit and make “perfect” for your needs.

The next section of this chapter identifies the categories of surveys found in the Survey Library. We then reproduced more than 50 for your reference. When building your own survey just pick questions that fit, or nearly fit your needs. A few edits and you are on your way.

Qualtrics also allows you to select surveys from the library and copy them into your account. Your brand administrator can also set up survey libraries for your organization or division. Your company’s surveys can be shared, copied, edited, and improved to meet your specific needs.

Finally, if you have a survey you would like included in the Qualtrics survey library, just send us a note. We will even give you a byline for credit.

Conclusion

Congratulations. We hope you have enjoyed this overview of survey building. We have discussed everything from how to organize your survey to question types and question scaling. Chapter 1 provided 7 Survey Tips for organizing and building a great survey.

In Chapter 2, we discussed how to write survey questions. Chapter 3 explored the different questions types that are available to you in Qualtrics.

50 scales for building your questions and collecting the type of data that you want and need were the subject of chapter 4. Chapter 5 went deeper and explored specific sample questions that can be used in most standard surveys.

Chapters 6 and 7 provided insight into how to create customer satisfaction surveys and concept test surveys. Here, discussions focused on the conceptual building blocks that are part of the standard methodology for building these types of surveys.

Chapter 8 introduced the Qualtrics survey library and the hundreds of surveys that are found there. You can view and use these surveys. Just select and copy a survey to your account and edit away. You can customize it to meet your needs in minutes. We conclude the next section (the survey appendix) with more than 50 surveys for your reference.

This book is part of a series of books available free online to Qualtrics users. We suggest that you access our other books to improve your research knowledge and Qualtrics experience.

You might start with the Guide to Qualtrics and learn all of the ins and outs of the Qualtrics features. Basic Marketing Research: Designing Your Study is a practitioner’s overview of the fundamentals of marketing research. The third volume in this series, Basic Marketing Research: Measurement and Analysis provides an introduction to measurement and scaling, along with an overview that extends from simple one-variable analyses to advanced multivariate analyses. You will be introduced to basic data analysis, how to select the proper statistical tests, and how to interpret the results. This will include a primer on statistics and univariate and multivariate analysis.

Each book is available on the Qualtrics University website for our Qualtrics users. We hope you will enjoy them. Happy Researching!
These are but a sample of the surveys that can be found in the Qualtrics Survey Library.

Ad or Concept Evaluation (General)

This survey is an evaluation of a TV Commercial for the fictional Roger’s Radio Store. It could be replicated for a Concept Evaluation Survey as well.

The survey begins when a respondent is shown the commercial (or concept). These questions follow.

*Note: Qualtrics allows you to embed a video into your survey. With this feature, you can show the video as part of the survey.

**Feel free to remove the sources. Those are just there for your benefit, so you know which top researchers created these questions.

Initial Reaction:
Please rate the Roger’s Radio Store commercial by telling us how much you agree with each statement.

<table>
<thead>
<tr>
<th>Statement</th>
<th>Strongly Disagree</th>
<th>Disagree</th>
<th>Somewhat Disagree</th>
<th>Somewhat Agree</th>
<th>Agree</th>

</tr>
</thead>
<tbody>
<tr>
<td>The commercial irritated me - it was annoying.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>The commercial was in poor taste.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>I felt as though I was right there in the commercial experiencing the same thing.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>The commercial was silly.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>I liked the commercial because it was personal and intimate.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>That commercial insults my intelligence.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>I felt the commercial talked down to me.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>

Brand Awareness, Attitudes, Interest, Likelihood of Purchase (Touchscreen Table)

Researcher Note: This is a survey about the Asus EEE Pad tablet.

It seeks to determine how aware consumers are of the Asus tablet in comparison with other brands.

This survey also measures attitudes, interest, and likelihood to purchase.

Thank you for taking our survey today. It deals specifically with touch screen tablet. Your response is completely anonymous and should only take 5 minutes.

Thinking about the touch screen tablets, List up to 5 brands that you are most familiar with.

<table>
<thead>
<tr>
<th>Enter Brand Names</th>
<th>How Familiar are you with this brand?</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Below</td>
</tr>
<tr>
<td>Brand 1</td>
<td></td>
</tr>
<tr>
<td>Brand 2</td>
<td></td>
</tr>
<tr>
<td>Brand 3</td>
<td></td>
</tr>
<tr>
<td>Brand 4</td>
<td></td>
</tr>
<tr>
<td>Brand 5</td>
<td></td>
</tr>
</tbody>
</table>

Please rank the following brands of touch screen tablets according to how familiar you are with them.
A ranking of 1 means it is most familiar to you.

Samsung Galaxy
Motorola Xoom
T-Mobile Slate
Asus EEE Pad
Blackberry Playbook

Thinking about (PIPE IN MOST FAMILIAR), the brand you are most familiar with, how would you evaluate this brand?
Please indicate your level of interest in (PIPE IN MOST FAMILIAR).

If you were shopping for a sports car today, to what degree would you consider buying a BMW?

Please consider assuming you are looking for a $40k - $60k sports car

- BMW would be my top choice
- BMW would be in my set of top choices
- BMW would not be among my top choices
- I would not really consider buying a BMW

Considering only your most recent sports car purchase, how likely would you be to recommend the purchase of a [PIPE FAVORITE CHOICE] to a friend or colleague? (0 is not at all likely, 10 is extremely likely)

Block 1

What would be your main reason for buying our product?

[Optional response]

Overall, how interested are you in buying this product if it were available? Please check one.

<table>
<thead>
<tr>
<th>Interest Level</th>
<th>Strongly Disagree</th>
<th>Disagree</th>
<th>Neither Agree nor Disagree</th>
<th>Agree</th>
<th>Strongly Agree</th>
</tr>
</thead>
</table>

Which of the following best describes your need for this product?

- I really need this product because nothing else can solve this problem.
- This is a minor improvement over what I currently use.
- It looks okay but is about the same as what I’m doing now.
- My current product would serve me better.
- I feel no need to purchase this product.

Based on the description, what price would you expect to pay for the product?

[Optional response]

Assuming the new product is priced comparably to other major brands, would you say it is a...

<table>
<thead>
<tr>
<th>Value</th>
<th>Very poor value</th>
<th>Somewhat poor value</th>
<th>Average value</th>
<th>Fairly good value</th>
<th>Very good value</th>
</tr>
</thead>
</table>
In what ways does the described product appear to be superior to other [Product Category] brands?

Overall, what would be your most important factors in choosing a [Product Category]? Please check three.

- Value
- Best performance
- Good repair/Warranty service
- Recognized brand name
- High quality
- Shopping convenience
- Easy/fast service
- Discount
- Good sales representative/dealer/owner
- Broad selection of products
- Do not know
- Other

Other than the product itself, which of the following would most influence you when deciding to buy a [Product]?

- Commentary on the Internet/Web site
- Word-of-mouth
- Sales/service representative
- Industry publications
- Advertising
- Trade shows/events
- Guarantee/warranty offers
- Other

What other brands of [Product Category] have you used? (Check all that apply.)

- Brand A
- Brand B
- Brand C

Block 2

What is it that you like about ${lm://Field/1}? Please enter as many items as you wish.

What do you like least about ${lm://Field/1}?
Brand Pricing and Concept Evaluation

This survey is about a new [product/service] concept that is described as follows:

[ENTER PRODUCT/SERVICE DESCRIPTION HERE]

How would you best describe your familiarity with a product/service like that described above?

○ I was not aware of such a product/service
○ I am generally aware
○ I have investigated or researched such products
○ I have participated in a demo of a product like this
○ I have purchased or regularly use a product like this

Are you a current user of [Product/Service]?

○ Yes
○ No

How long have you used [Product/Service]?

Under 1 month 1-6 months 6 months to 1 year 1-2 years 3 years or more Do not currently use

How often could you find a use for this [Product/Service]?

Once a week or more often 2-3 times a month Once a month Every 2-3 months 2-3 times a year Once a year Do not use

Based on the description, how interested would you be in buying this new [Product/Service] if priced within your budget?

Not at All Interested Not Very Interested Neutral Somewhat Interested Very Interested

What is it that you like most about the [Product/Service]?

What do you like least about the [Product/Service]?

Which of the following best describes your need for this product?

○ I really need this product because nothing else can solve this problem.
○ This is a minor improvement over what I currently use.
○ It is about the same as what I'm currently using.
○ My current product would serve me better.
Which of the following best describes your need for this product?

- I really need this product because nothing else can solve this problem.
- This is a minor improvement over what I currently use.
- It is about the same as what I'm currently using.
- My current product would serve me better.
- I am not at all interested in this product.

About what would you expect to pay for a new [Product/Service] like the one described? (Nearest dollar)

---

At what price would this new product begin to look inexpensive or cheap? Select one.

- [Enter estimated FMV] $
- FMV + 30$
- FMV + 20$
- FMV + 10$
- FMV + 5$
- FMV - 5$
- FMV - 10$
- FMV - 20$
- FMV - 30$

At what price would the product begin to look too expensive? Select one.

</table>

- I am very concerned about low prices, but I am equally concerned about product quality.
- When grocery shopping, I compare the prices of different brands to be sure I get the best value for the money.
- When purchasing a product, I always try to maximize the quality I get for the money I spend.
- When I buy products, I like to be sure that I am getting my money's worth.
- I generally shop around for lower prices on products, but they still must meet certain quality requirements before I buy them.
- When I shop, I usually compare the "price per ounce" information for brands I normally buy.
- I always check the prices at the grocery store to be sure I get the best value for the money I spend.

Consumer Behavior: Hierarchical Value Survey

What brand of athletic shoe do you wear most often?
- Adidas
- Converse
- Nike
- Saucony
- Asics
- K-Swiss
- Puma
- Other
- Brooks
- New Balance
- Reebok

The last time you purchased athletic shoes, did you purchase the same brand shoe, or did you purchase a different brand?
- Same brand
- New Brand

What sport is this for?
- Everyday wear
- Walking
- Football
- Other field sport
- Basketball
- Running
- Golf
- Other court sport
- Training
- Soccer
- Tennis

In thinking about this purchase, was the last pair of athletic shoes you purchased for a different sport or activity or for the same activity as the previous pair?
- New activity
- Same activity

How long have you been purchasing athletic shoes for this sport?
- Less than 6 months
- 6 months - 1 year
- 1 - 2 years
- 3 - 5 years
- 5 - 10 years
- More than 10 years

How satisfied are you with your [pipe text from shoe brand] shoes?
- Miserable
- Unsatisfied
- Satisfied
- Very Satisfied
- Delighted

Product Attributes: Think about the last time you chose a pair of athletic shoes and assume you were looking for the "Ideal shoe." How important are the following attributes to you?

<table>

This final set of questions is about you and will help us classify your answers.
Within what price range are the athletic shoes you typically purchase?

☐ Less than $15.00  ☐ $50.00 to $69.99  ☐ $110.00 to $139.99
☐ $15 to $29.99  ☐ $70.00 to $89.99  ☐ $140.01 to $159.99
☐ $30.00 to $49.99  ☐ $90.00 to $109.99  ☐ $160.00 or more

What is your age?

18 - 24  25 - 34  35 - 44  45 - 54  55 - 64  65 and over

Indicate your marital status.

Single  Married  Widowed  Divorced

Please indicate your approximate yearly household income before taxes. (Include total income of all adults living in your household.)

Under $25,000  $25,001 - $49,999  $50,000 - $74,999  $75,000 - $99,999  $100,000 - $149,999  $150,000 or More

What is your highest level of education?

Grade school, Jr, High, or High School  High school graduate  Some college  College graduate  Post graduate/professional

Risk Preferences

- ![ ] When I try to do projects on my own, I'm afraid I will make a worse mess of them than if I had just left them alone.
- ![ ] I always follow manufacturer's warnings against removing the backplates on products.
- ![ ] When I try to do projects on my own, without exact directions, they usually work out really well.
- ![ ] I find very little instruction is needed to use a product similar to one I'm already familiar with.
- ![ ] I'm afraid to buy a product I don't know how to use.
- ![ ] I'm uncomfortable working on projects different from types I'm accustomed to.
- ![ ] I always follow manufacturer's warnings regarding how to use a product.
- ![ ] If a product comes in an assembled and unassembled form, I always buy the assembled form, even though it costs a little more.
- ![ ] I like to improvise when I cook.
Consumer Behavior: Internet Shopping Study

2012 Internet Shopping Survey
Thank you for participating in the Annual Internet Shopper Survey. This national study tracks trends in Internet usage and shopping.

Instructions: Please answer all questions. For most questions, you need only check a box or enter a number for your answer. The survey will prompt you to complete all questions. The survey will take about 15 minutes.

At the completion of the survey you will have the opportunity to enter your E-mail address to enter the drawing for two iPod Nanos. All information is strictly confidential and will not be shared.

How many times in the last year did you do the following?

<table>
<thead>
<tr>
<th></th>
<th>0</th>
<th>1</th>
<th>2-5</th>
<th>6-15</th>
<th>16-50</th>

# Consumer Behavior: Marketing Mavens

Please indicate how much you agree with the following statements:

<table>
<thead>
<tr>
<th>Not at all like me</th>
<th>Not like me</th>
<th>Neutral</th>
<th>Like me</th>
<th>Just like me</th>
</tr>
</thead>
<tbody>
<tr>
<td>I like introducing new brands and products to my friends.</td>
<td>○</td>
<td>○</td>
<td>○</td>
<td>○</td>
</tr>
<tr>
<td>I like helping people by providing them with information about many kinds of products.</td>
<td>○</td>
<td>○</td>
<td>○</td>
<td>○</td>
</tr>
<tr>
<td>People ask me for information about products, places to shop, or sales.</td>
<td>○</td>
<td>○</td>
<td>○</td>
<td>○</td>
</tr>
<tr>
<td>If someone asked where to get the best buy on several types of products, I could tell them where to shop.</td>
<td>○</td>
<td>○</td>
<td>○</td>
<td>○</td>
</tr>
<tr>
<td>My friends think of me as a good source of information when it comes to new products or sales.</td>
<td>○</td>
<td>○</td>
<td>○</td>
<td>○</td>
</tr>
</tbody>
</table>

Think about a person who has information about a variety of products and likes to share this information with others. This person knows about new products, sales, stores, and so on, but does not necessarily feel he or she is an expert on one particular product. How well would you say this description fits you?

I spent a lot of time talking with sales people when I was deciding on my new [PRODUCT].

At the time I bought my new [PRODUCT], I thought I had gathered sufficient information to make my best purchase.

Before I bought my new [PRODUCT], I thought a great deal about it.

I referred to newspapers, magazines, and brochures a lot before I bought my new [PRODUCT].

I visited all the conveniently located dealers before I decided which [PRODUCT] to buy.

I spent adequate time searching for information before I bought my new [PRODUCT].

If I were going to purchase a [PRODUCT], I would search several stores for the lowest price [ALTERNATE WORDING: ...for a price lower than you would find at this store].

Please tell us about your search for [PRODUCT or BRAND] by reporting the amount of information you gathered from each of the following sources.

<table>
<thead>
<tr>
<th>None</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>6</th>
<th>7</th>
<th>8</th>
<th>9</th>

<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>I felt obligated to make a careful analysis of the alternatives before making a selection.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>I have one or two favorite stores I shop in for this type of purchase.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>I felt it was necessary to talk to a number of friends or because of my lack of knowledge and expertise about this product category.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>I felt I would have obtained a better deal on this item by shopping around and comparing prices.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>I like to devote considerable time and energy when making a product choice such as this one.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Selecting an appropriately-styled model was very important to me.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>I can make many connections or associations between the use of this product and experiences in my life.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>I was very concerned about possible performance problems when searching for the item I purchased.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Using the product I purchased is one of the most enjoyable things I do.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>I did not have any favorite brands in this search category before beginning my search.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>I felt quite knowledgeable about this product category before I began shopping for it.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>There were wide price differences between available choices.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>I received considerable pressure from other family members to purchase this item quickly.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
This purchase was difficult because the items in this product category are so technologically complex.

This purchase was not planned, but the item caught my eye in the store and I decided to purchase it.

It was my responsibility to make the right product choice.

The amount of money I could or would spend on this item was very limited.

I felt comfortable judging the differences between alternatives relatively well.

I generally make purchases of this kind at one particular store because I believe they offer the best values around.

I enjoyed shopping for this product.

I was very concerned about the economic consequences of making a poor or incorrect choice.

Generally, I like to make purchases quickly without shopping around at different stores, because it just is not worth my effort.

I am concerned about my friends’ approval of my choice.

Because of my lifestyle, I feel this is a product that ought to be important to me.

I was very concerned about my product choice because of the consequences of selecting an item that did not perform as I anticipated.

I believe I could be quite helpful to friends who are having difficulty making a selection in this product category.

I had a strong brand preference in this category because of my previous experience with some of these brands.
**Consumer Behavior: Social Belonging**

**Customer Satisfaction: NPS**

Researcher Note:
The *Net Promoter Score is a common test of customer satisfaction that was made popular by Fred Reichheld of Bain & Company.

The score is calculated based upon one question (used twice in this survey) by sorting respondents into Promoters (High), Neutrals (Middle) and Detractors (Low), then subtracting the percentage of respondents that are Detractors from the percentage that are Promoters.

This survey calculates the Net Promoter Score for two instances: the purchase of an iPad, and overall feelings of Apple. In addition, it collects other feedback and demographic information for future segmentation.

*The Net Promoter Score is a registered trademark of Fred Reichheld, Bain & Company and Satmetrix.

Considering only your most recent purchase experience, how likely would you be to recommend the purchase of an Apple iPad to a friend or colleague? (0 is not at all likely, 10 is extremely likely)

<table>
<thead>
<tr>
<th>Not at All Likely (0)</th>
<th>(1)</th>

Project Management Team Evaluation

Name: ____________________________
Department: __________________________________________

What is the average size of projects that you work on in terms of the core team?

1-5 persons 6-15 persons 16-25 persons 26-50 persons Greater than 50 persons

What is the average duration of these projects?

1-6 months 6-12 months 1-2 years Greater than 2 years

List the 5 most important activities that you perform.

_________________________________________________________________________________

Rank the following according to the percent of time spent on each phase of the project. (1 took the most time, 4 took the least)

☐ Administration Project updates etc.
☐ Operation/Production
☐ Technical
☐ Other

How would you define project success? (check all that apply)

☐ On time
☐ Within budget
☐ To expected quality
☐ Satisfies customer
☐ The organization realizes its business benefits: e.g. profitability
☐ The company is competitively positioned

Below is a list of factors which may contribute to project success. Please evaluate each item’s importance.

<table>
<thead>

Perceptions Section

DIRECTIONS: The following set of statements relate to your feelings about XYZ Company's repair service.
For each statement, please show the extent to which you believe XYZ has the feature described by the statement. Once again, circling a "1" means that you strongly disagree that XYZ has that feature, and circling a "7" means that you strongly agree. You may circle any of the numbers in the middle that show how strong your feelings are.

There are no right or wrong answers - all we are interested in is a number that best shows your perceptions about XYZ’s repair service.

TANGIBLES
P1. XYZ has modern-looking equipment.
P2. XYZ’s physical facilities are visually appealing.
P3. XYZ’s employees are neat-appearing.
P4. Materials associated with the service (such as pamphlets or statements) are visually appealing.

RELIABILITY
P5. When XYZ promises to do something by a certain time, it does so.
P6. When you have a problem, XYZ shows a sincere interest in solving it.
P7. XYZ performs the service right the first time.
P8. XYZ provides its services at the time it promises to do so.
P9. XYZ insists on error-free records.

RESPONSIVENESS
P10. Employees of XYZ tell you exactly when services will be performed.
P11. Employees of XYZ give you prompt service.
P12. Employees of XYZ are always willing to help you.
P13. Employees of XYZ are never too busy to respond to your requests.

ASSURANCE
P14. The behavior of employees of XYZ instills confidence in customers.
P15. You feel safe in your transactions with XYZ.
P16. Employees of XYZ are consistently courteous with you.
P17. Employees of XYZ have the knowledge to answer your questions.

EMPATHY
P18. XYZ gives you individual attention.
P19. XYZ has operating hours convenient to all its customers.
P20. XYZ has employees who give you personal attention.
P21. XYZ has your best interest at heart.
P22. Employees of XYZ understand your specific needs.

Point-Allocation Question

DIRECTIONS:
Listed below are five features pertaining to telephone companies and the repair services they offer. We would like to know how important each of these features is to you when you evaluate a [PRODUCT CATEGORY] company’s quality of repair service.

Please allocate a total of 100 points among the five features according to how important each feature is to you – the more important a feature is to you, the more points you should allocate to it.

Please ensure that the points you allocate to the five features add up to 100.

1. The appearance of the telephone company's physical facilities, equipment, personnel, and communications materials
2. The ability of the telephone company to perform the promised service dependably and accurately.
3. The willingness of the telephone company to help customers and provide prompt service.
4. The knowledge and courtesy of the telephone company's employees and their ability to convey trust and confidence
5. The caring, individualized attention the telephone company provides to its customers

- Easy
- Very Easy

What would you recommend to improve the instructor's performance?

What are the major strengths of this course?

What are the major weaknesses of this course?

To the students of this class: Thank you for taking the time and effort to respond to this questionnaire. Please give your most candid and thorough response to the questions below. The information you share here will remain confidential. Please try to complete and send the course evaluation ASAP.
E-Retailer Service

Thank you for providing feedback about the COMPANY Website and your experience there

This scale is measured as a hierarchy of responses. Attribute items (sub-scales) roll up to measure objects (Website, Transactions, Recovery). In turn, objects can be rolled up to estimate overall service quality. The overall measures of satisfaction and behavioral intentions can either used independently, or can be used in a predictive model as dependent variables with the objects and sub-scale items as independent variables.

Website Service Quality

Please evaluate the COMPANY website for their SERVICE QUALITY by answering the following questions

<table>
<thead>
<tr>
<th></th>
<th>Strongly Agree</th>
<th>Agree</th>
<th>Neither Agree nor Disagree</th>
<th>Disagree</th>
<th>Strongly Disagree</th>

ISP Service Evaluation

Thank you for contacting our help desk. We truly want to exceed your expectations. Please help us better serve you by completing the following questionnaire.

Please indicate how you feel about the following questions.

<table>
<thead>
<tr>
<th>Excellent</th>
<th>Very Good</th>
<th>Good</th>
<th>Fair</th>
<th>Poor</th>
</tr>
</thead>
</table>

Overall, how do you feel about your experience with [ISP] as your Internet service provider?

How do you rate your [ISP] connection (including reliability, speed, disconnects, etc.)?

How would you rate [ISP] software for ease of installation and use?

For which operating system did you place your call to support?

Linux  Windows  Mac 8.x or higher  Other

Approximately how long were you on hold before being helped by our representative?

Less than a minute  1-5 minutes  5-10 minutes  10 minutes or more  Do not remember

How friendly was the support representative?

Very friendly  Friendly  Neither friendly nor unfriendly  Less friendly than I expected  Unfriendly

How professional was the support representative?

Very professional  Professional  Neither professional nor unprofessional  Less professional than I expected  Unprofessional

How interested in solving your problem was the support representative?

Very interested  Interested  Neither interested nor uninterested  Less interested than I expected  Uninterested

When solving your problem, how would you rate the information provided?

Extremely well presented and understandable  Well presented and understandable  Sufficient to solve the problem  Difficult to understand  Extremely difficult to understand

Was your problem solved on this call?

Yes  No  Do not remember
Why was your problem not solved?

- The problem was caused by a piece of software other than [ISP] software.
- The problem was due to a network or server outage.
- The problem was with my system or phone lines.
- I got frustrated and decided it was not worth fixing my problem.
- The rep lacked the knowledge to resolve my [ISP] software or connection problem correctly.
- Other

If you needed to contact [ISP]'s technical support again and were given the option to speak with this representative, would you?

- Yes
- No
- Undecided

Why not?

Comparing [ISP’s] technical support to that provided by other companies, would you say that, overall, [ISP’s] technical support is

- much better than other companies’ technical support.
- better than other companies’ technical support.
- about the same quality as other companies’ technical support.
- worse than other companies’ technical support.
- much worse than other companies’ technical support.
- I have never contacted another company for technical support.

Thank you for helping us improve our service to you. If you require further assistance, please send a separate e-mail to support@isp.com. This will ensure a timely response. We can also be reached at 1-800-123-4567 24 hours a day, 7 days a week.
Service Evaluation: Medical Examination

The following set of questions deals with medical examination services. These services perform routine examinations like the kind that are used to qualify for life insurance.

How Important are the following?

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Not At All Important</th>
<th>Somewhat Unimportant</th>
<th>Neutral</th>
<th>Somewhat Important</th>
<th>Very Important</th>
</tr>
</thead>
<tbody>
<tr>
<td>Speed in Completing Examination and Reports</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Accuracy and Completeness in Filling Out Your Report</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Expertise of Medical Staff</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Medical Representative Treatment of Your Client</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Offers All Services Required for Examination</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Wide Geographic Area of Service Coverage</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Hand Delivery of Reports to Insurance Office</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Personal Relationship with a Representative of the Agency</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Which attribute do you consider to be most important when SELECTING a medical examination service?

If a medical examination service were to guarantee
(A) Professionalism in the medical staff,
(B) Accurately filled out and completed reports, and
(C) A completed report back to you within 3 days,
Would you change to this agency?

No  Yes

I'm now going to ask you about your opinions of several medical examination services.

First, let's consider your most preferred service. Which company would that be?
Now, how would you rate this company on each of the following items?

<table>
<thead>
<tr>
<th>Item</th>
<th>Excellent</th>
<th>Very Good</th>
<th>Good</th>
<th>Fair</th>
<th>Poor</th>
</tr>
</thead>
<tbody>
<tr>
<td>Speed in Completing Examination and Reports</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Accuracy and Completeness in Filling Out Your Report</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>

<tr>
<td>Wide Geographic Area of Service Coverage</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Hand Delivery of Reports to Insurance Office</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Personal Relationship with a Representative of the Agency</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

We have asked you a number of specific questions about medical examination services. To help us understand your overall attitudes about these services, we have additional questions. These are the most important answers you will give us to this survey. Please be very specific.

What do you like most about ${q://QID4/ChoiceTextEntryValue}?

What do you dislike most about ${q://QID4/ChoiceTextEntryValue}?
Service Evaluation: Product Supplier

Dear Customer:

Thank you for giving us the opportunity to better serve you. Please help us by taking a few minutes to tell us about the service that you have received so far. We appreciate your business and want to make sure we meet your expectations. Attached, you will find a coupon good for ... We hope that you will accept this as a token of our good will.

Sincerely,
[MANAGER_NAME]

Service Evaluation: Public Safety Service

Thank you for your desire to provide valuable feedback to {City}. The Public Safety feedback we receive will help us to improve our services. We are anxious to understand how we can better serve you. This survey will take you approximately 15 minutes to complete.

Personal information (i.e. email addresses, phone numbers, etc.) collected through this survey. City surveys will be used exclusively for the purposes of gathering information to assist {City} in its mission to improve the quality of life for its residents. This information will not be provided nor sold to any third party groups or entities.

If you have any questions about the survey please contact {City} during regular business hours at (999-999-9999)

What district do you live in?
○ District 1  ○ District 3  ○ District 5  ○ District 7
○ District 2  ○ District 4  ○ District 6  ○ Not Sure

Please evaluate the Public Safety Department’s handling of the following issues:

<table>
<thead>
<tr>
<th></th>
<th>Very Ineffective</th>
<th>Ineffective</th>
<th>Somewhat Ineffective</th>
<th>Somewhat Effective</th>
<th>Effective</th>
<th>Very Effective</th>
</tr>
</thead>
<tbody>
<tr>
<td>Animal Control</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Drug Related Crime</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Emergency Response (EMT, Ambulance)</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Felonies (serious crime: murder, rape, battery, arson, etc.)</td>
<td></td>
<td></td>
<td></td>

Website Promoter Score

Researcher Note: The Web Promoter Score is a measurement used by leading companies to evaluate the quality of their Websites.

The score is calculated based upon one question (question 2 in this survey) by sorting respondents into Promoters (High), Neutrals (Middle) and Detractors (Low), then subtracting the percentage of respondents that are Detractors from the percentage that are Promoters.

This survey calculates the Web Promoter Score for www.qualtrics.com and provides two separate wording options for the critical question. In addition, this survey collects other feedback and demographic information for future segmentation.

*The Web Promoter Score is a registered trademark of Qualtrics.

Thank you for taking our survey today. We would like to know about your reaction to www.qualtrics.com so we can make sure to improve your experience.

Please take 5 minutes to fill out this quick survey. Your response is completely anonymous.

How often do you visit the www.qualtrics.com Website?

<table>
<thead>
<tr>

(Feeding Back for Improvement) What can we do in the future to earn a score of 9 or 10?

Finally, tell us a little bit about yourself...

What is your age?

What is your gender?

What is the highest level of education you have completed?
How much time do you spend on the Internet?

Less than 1 hour per day 1-4 hours per day 5-8 hours per day 9 or more hours per day

Demographics

These final few questions will help us to understand your answers. Again, all information is confidential.

What is your age?

What is your gender?

What is the highest level of education you have completed?

What is your family structure?

Which of the following best describe your household situation? (check all that apply)

- Children, preschool
- Children, elementary school
- Children, Jr / Sr. high school
- Children, post high school
- Grandchildren with neither parent present, living in your home
- Parents, inlaws or other adult family in your home
- Providing around the clock care for parents, inlaws or others
- None of the above

What best describes your employment?

- Management, professional, and related
- Service
- Sales and office
- Farming, fishing, and forestry
- Construction, extraction, and maintenance
- Production, transportation, and material moving
- Government
- Retired
- Disabled
- Unemployed
- Other

Which category best represents your combined total annual household income?

What best describes your Race/Ethnicity? (Multiple items may be selected)
What best describes your Race/Ethnicity?  
(Multiple items may be selected)

- White
- Black, African American, Negro
- Spanish/Hispanic/Latino, Mexican, Mexican Am., Chicano, Puerto Rican, Cuban, other Spanish/Hispanic/Latino
- Asian Indian, Chinese, Philippine, Japanese, Korean, Vietnamese, Native Hawaiian, Guamanian or Chamorro, Samoan, Other Pacific Islander, Other Asian
- American Indian, Alaska Native
- Other (please specify)

In which state or country do you live?

Thank you for your time in helping us at COMPANY to continually improve our products and services.

If you have any questions we can help you with, please contact support@company.com, or call 1-800-123-1234 and a representative will be happy to assist you.
Website Visitor Follow-Up

Thank you for visiting our site. We would like to know more about you so that we can be sure to bring you the kinds of information and services that you need. Please fill out the information below by reading each question and then clicking on your answer. Thank you for your help.

How did you find out about the site?
- Followed link from another web page
- Followed a graphical banner/icon from another web page
- Found by using a search engine
- Saw postings to www-related news groups
- Received e-mail from e-mail mailing list
- Was told URL by friend
- Read about it in newspaper/magazine
- Other source

What is your age?
- under 13
- 13-17
- 18-34
- 35-49
- 50-64
- 65 or older

What do you enjoy doing in your spare time? (You may check more than one)
- Theater
- Video Games
- Automobiles
- Gardening
- Hunting
- Movies
- Trivia
- Cooking
- Sports
- Fishing
- Restaurants
- Computers
- Reading
- Arts and Crafts

How many hours per day are you on-line?
- 0-1
- 1-2
- 2-3
- 3-4
- 4-5
- More than 5

What do you use the internet for?
- Information Gathering
- Games
- Real Estate
- Classifieds
- Academic Research
- News
- E-mail
- Stock Market
- Shopping
- Sports News
- Job Hunting
- Other

From where do you most often access the Internet?
- Home
- School
- Office
- Other

If you have purchased or plan to purchase goods on the Internet, what kinds of goods would you be most interested in?
- Computers or peripherals
- Flowers
- Fast Food
- Software
- Concert Tickets
- Books or Magazines
- CDs/Videos
- Travel
- Other

Other

Other source
What is your gender?
- Male
- Female

What is your level of education?
- Some High school
- High school graduate
- Some college
- College Graduate
- Some Postgraduate
- Postgraduate

What is your household income?
- Less than $15,000
- $15,000 - $24,999
- $25,000 - $34,999
- $35,000 - $49,999
- $50,000 - $74,999
- $75,000 - $99,999
- $100,000 - $149,999
- $150,000+

What is your current occupation?
- Student
- Retired
- Clerical
- Professional
- Service Staff
- Homemaker
- Not Employed

Miscellaneous Surveys (1)

Informed Consent Form

294
Informed Consent Form

Introduction
This study attempts to collect information about differences in individual perception of older role models...

Procedures
You will be shown a photograph and short biography of a simulated potential professor and asked to complete a short questionnaire about the person in the photograph. The questionnaire consists of 15 questions and will take approximately 20 minutes or less. Questions are designed to determine how you expect a simulated professor would behave in a class setting based on your past experience. This questionnaire will be conducted with an online Qualtrics-created survey.

Risks/Discomforts
Risks are minimal for involvement in this study. However, you may feel emotionally uneasy when asked to make judgments based on the photograph and biography provided. Although we do not expect any harm to come upon any participants due to electronic malfunction of the computer, it is possible though extremely rare and uncommon.

Benefits
There are no direct benefits for participants. However, it is hoped that through your participation, researchers will learn more about which qualities students prefer in professors.

Confidentiality
All data obtained from participants will be kept confidential and will only be reported in an aggregate format (by reporting only combined results and never reporting individual ones). All questionnaires will be concealed, and no one other than then primary investigator and assistant researches listed below will have access to them. The data collected will be stored in the HIPPA-compliant, Qualtrics-secure database until it has been deleted by the primary investigator.

Compensation
There is no direct compensation, however, participants may earn extra academic credit, at the discretion of their professors.

Participation
Participation in this research study is completely voluntary. You have the right to withdraw at anytime or refuse to participate entirely without jeopardy to your academic status, GPA or standing with the university. If you desire to withdraw, please close your internet browser and notify the principal investigator at this email: (email). Or, if you prefer, inform the principal investigator as you leave.

Questions about the Research
If you have questions regarding this study, you may contact (principal investigator), at 555-555-5555, principleinvestigator@fakeemail555.com or (assistant 1) 666-666-6666, assistant1@fakeemail555.com, (assistant 2) 777-777-7777, assistant2@fakeemail555.com.

Questions about your Rights as Research Participants
If you have questions you do not feel comfortable asking the researcher, you may contact (Dr Mentoring Professor), 222-222-2222, 1030 SWKT, drmentoringprofessor@greatuniversity.edu. Or contact the director of (your University)'s Institutional Review Board, Bob Irb, 888-888-8888, bobirb@greatuniversity.edu.

I have read, understood, and printed a copy of, the above consent form and desire of my own free will to participate in this study.
