

# Safety Recognition and Communication Program

This is a safety recognition and communication program that will reward everyone on-site for working safely. [Owner/GC Name] already conducts weekly safety assessments on this site. These assessments provide an overall safety score for the worksite.

## How are safety scores calculated?

- Safety management take note of **unsafe** conditions as well as **safe** work practices (called "unsafes" and "safes").
  - For example: Fall protection, housekeeping, PPE, and environmental concerns such as dust control and noises
- The **safety score** represents the **number of safes out of the total** number of observations.
- The score takes into account the **potential danger** of each situation.

## Different trades, different risks:

- Since risks vary across trades, **dangerous tasks** performed safely get **more points**.
- For example, a contractor would get more credit for having correct fall protection than for having proper trash storage.

***If the site's monthly safety score is above [threshold%], all workers will be treated to a free lunch from***

***[restaurant name] and be eligible to participate in a free [high value item] raffle.***

## **Feedback:**

- Each week, the **worksite safety score** will be displayed on a poster.
- Individual contractors will also be able to see their **individual company's safety scores**.
- If the overall safety score for the site is above [threshold %] at the end of the month, everyone on-site will receive a **free lunch** and be eligible to participate in a **free [high value item] raffle**.

<b>Contractor</b>	<b>Safety Score</b>
Contractor A	80%
Contractor B	92.7%
Contractor C	88.2%
Contractor D	100%
Contractor E	95.2%
Contractor F	96.6%
Contractor G	85.0%
<b>Overall</b>	<b>91.1%</b>
