

# Inter-disciplinary Research Through Student Collaboration

## **Background/Introduction**

- Need to improve student writing ability and move away from “comfort zone” papers
- Addresses how research areas are interconnected

**Goal:** Shared research site resulting in College/University wide collaborative research capabilities

## **Details**

- CPS or University wide Sharepoint site
- NU Community posts areas of research interest
- Provides alternatives for broader research

**Abstract:** Establish a common access / Sharepoint portal providing interdisciplinary research topics from which students may prepare papers which support broader student/faculty research

## **Relevancy Across Disciplines:**

The interrelationship between areas of research is significant; the quality of research increases when different disciplines conduct related research vice focusing only on a particular subject to complete course requirements

## **Outcomes**

- Common access site
- Engaged Community
- Research areas posted;
- Provides alternatives for student research from differing perspectives
