

I believe in Principle "Pain points are the foundations for new ideas." I am aware of how challenging it may be for an international student to comprehend, analyze, and draw lessons from their surroundings. We stand out and take the lead because of our ideas and ideologies. As a graduate student in terms of my academic department, I found a gap between the students and industrial professionals and I started the student organization which fills that gap and as a senator in GSG I raised my voice for increasing the On- Campus employment. I was the chairperson of Liaison's IPA-SF, India for one year and part of education team where I made few suggestions to Pharmacy Council of India (PCI) which are well accepted. This made me to choose Academic affairs position where with my prior experience I can contribute to this position

The academic affairs position in graduate student government typically involves advocating for the academic interests and concerns of graduate students, as well as working with university administrators and faculty to improve the quality of graduate education. As a graduate student applying for this position, I have a strong interest in higher education policy and a commitment to ensuring that graduate students receive the support they need to succeed academically.

Some possible contributions that I might make in this role could include organizing events and workshops to help graduate students develop the skills they need to succeed in their academic programs, working with faculty and administrators to improve graduate student mentorship and advising, and advocating for policies that support graduate student research and professional development.

The goals for next tenure for me are to increasing the availability of funding and other resources for graduate students, and promoting a positive and supportive academic culture for graduate students. The driving force behind my decision to apply for this position might be a desire to make a positive impact on the lives of graduate students and to help shape the future of higher education.
