Technology Enabled Classrooms
Enhancing the education and teaching experience
What are technology enabled classrooms?

In partnership with Facilities and the Registrar’s Office, ITS has designed a new type of classroom to take full advantage of Tegrity, web conferencing and other education technologies.

All Northeastern classrooms are equipped with the basics, including DVD/VHS, hookups for laptops, and display(s). Many also have built-in computers.

The new classrooms – Type 2DV – have all of that plus microphones, audio/video recording equipment, and more.
What exactly is in the Type 2DV classrooms?

- One or more displays
- DVD/VHS player
- Windows computer with ITS-installed software
- USB hub and cabling with dongles for laptop/tablet/mobile hookup
- Mounted and wireless clip-on microphones for amplification and/or recording
- Pan/tilt/zoom video cameras for streaming or recording
What does this mean to me?

Academic Technology Services is constantly working to provide new technologies that integrate with Blackboard for use both inside and outside the classroom. Each of these Type 2DV classrooms allow faculty, staff and students to get the most out of those solutions.
