New Course

Global Energy Justice

Course Information:
- LAW 7676
- CRN = TBA
- 3 credits
- Instructor: Shalanda Baker

Course Description:
This course explores the social justice dimensions of the renewable energy transition, with a focus on the Global South. The first half of the course includes an exploration of the theoretical and legal backdrop of renewable energy development, including law and development theory, climate change governance, energy justice theory, and indigenous rights. The second half of the course explores structural approaches to renewable energy development in the Global South, including energy market liberalization, development finance, and community energy development. The course highlights selected case studies in Latin America and Africa and, through project work, students develop country-specific energy development expertise.
